

EDITORIAL

This year the Journal of Thermal Analysis is celebrating its seventh anniversary. Looking back over its activities of the past few years one can say that the role of the JTA in the thermal world has been successful. The guiding principles laid down at the start have been followed up to the present day. Thermal analysis has undergone a period of tremendous growth since the first issue of the journal was published. This increase is reflected among others by the number of high-level manuscripts submitted to JTA. Increase of our publication activity has therefore become inevitable.

We wish to inform our readers that in the course of 1975 two volumes (7 and 8) will be published with bi-monthly frequency. In this manner the timeliness of submitted papers will be ensured. We strongly believe that this solution will be met with satisfaction.
