International Short Course Announcement

Thermal Analysis in Polymer Research and Production

Intensive Short Course, May 25–27, 1998

Viscoelastic Properties of Polymers

Intensive Short Course, May 28–29, 1998.

Venue: Zürich Airport Hilton Hotel, Zürich, Switzerland

These courses are problem-oriented, concise, practical educational programs both for experienced thermal analysts as well as for newcomers to the field, presented by five experts of worldwide reputation. According to individual interests, the courses may be taken separately or combined. Registrants will have the unique opportunity to obtain one-on-one guidance on their specific problems.

The lectures will include details that typically are not available in textbooks or publications, such as: how to plan and optimize experimental conditions, how to eliminate costly trial-and-error experiments, how to interpret subtleties of thermal data, and what to expect for future trends in application.

Course Director: Prof. Edith A. Turi (Polytechnic University, Brooklyn, NY. and American Chemical Society, Washington, DC.).

For further information on program details, please contact Prof. Turi:

Pyrolysis '98

14th International Symposium on Analytical and Applied Pyrolysis

will be held Neuherberg (München) Germany, May 18–20, 1998

Venue: GSF-Research Center (Auditorium) Neuherberg near München

Topics

- Pyrolysis mechanisms
- Polymer analysis and characterization
- Polymer degradation, -processing and -recycling
- Degradation of cellulose, humic material and lignin
- Sediments and fossil fuel research
- Biological, medical and forensic applications
- Food and agricultural applications
- Pyrolysis in Environmental Sciences
- Pyrolysis in the arts
- Hyphenated Techniques (TA/MS, TA/FTIR)

More information:

C/o Prof. Dr. A. Kettrup
