William G. Young, Lawrence J. Andrews and Stanley J. Cristol. Polyenes. I. The Syathesis and Absorption Spectra of the Ionylideneacetones and Related Compounds.
Page 521. In Table I, the $\lambda_{\max }$ and $\epsilon_{\text {max. }}$. values for the solid and liquid $\beta$-ionylideneacetic acid should be inter-changed.-William G. Young.

Joseph R. Spies, E. J. Coulson, Dorris C. Chambers, H. S. Bernton and Henry Stevens. The Chemistry of Allergens. IX. Isolation and Properties of an Active, Carbohydrate-Free Protein from Castor Beans.
Page 751. In the second paragraph of the discussion and in Table II the values for the proportion of nitrogen precipitated by $5 \%$ trichloroacetic acid (TCA) are incorrect owing to inadvertent use of a lower concentration of TCA. The correct values are: CB-1A, $30.7 \%$; CB-65A, $17 \%$ and CB-60C, $74.4 \%$. The first three sentences of the second paragraph of the discussion should be changed to read: 'Eighty-seven per cent. of the nitrogen of CS-60C was precipitable by trichloroacetic acid (TCA), as compared with $74 \%$ for $\mathrm{CB}-60 \mathrm{C}$, and $17 \%$ for CB-65A. Some change occurred in either or both constitution and composition of CB-60C and CB-65A as the result of the fractionation procedures, because $30.7 \%$ of the nitrogen of the precursor, CB-1A, was precipitable by TCA.' The foregoing corrections do not influence the conclusions drawn.Joseph R. Spies.

Henry Gilman, Jack Swiss, H. B. Willis and F. A. Yeoman. Dibenzofuran. XX. 2,3,7,8-Derivatives.
Page 798. The dibenzofuran formula at the bottom of the first column should read:

Roger Adams and J. W. Mecorney. The Formation of a Chromone by the von Pechmann Condensation of Ethyl Acetoacetate with 4-Chloro-3,5-dimethylphenol.
Page 802. In column 2, line 20, for "coumarins" read "chromones."-Roger AdAms.

William G. Young, Lawrence J. Andrews, Seymour L. Lindenbaum and Stanley J. Cristol. The Reaction of Diazomethane with $\alpha$-Cyanocrotonic Acid.

Page 810. In column 2, formula VII, insert X on the vacant bond line, as in III.-Seymour L. Lindenbaum.

Elliot R. Alexander and Arthur C. Cope. A Simultaneous Condensation-Reduction Method for the Preparation of Ethyl Monoalkylcyanoacetates.
Page 887, Table I. The last name in column 1 should be "1-Methylheptyl" instead of " 1 -Methylhexyl."
Page 888, column 2, line 4 . Read "( 6.0 g., 0.1 mole)" for "( 6.0 g ., 0.05 mole )."-Arthur C. Cope.

Page 975. In the heading of the third section of Table $I$, for ' $I_{\mathrm{a}}=1.2 \times 10^{12}$ " read " $I_{\mathrm{a}}=12 \times 10^{12}$." W. Albert Noyes, JR.

Harry F. Pfann, D. J. Salley and H. Mark. Mechanism of Peroxide Initiated Styrene Polymerization.

Page 984. The authors write: "In this article an omission was made in Table II, Properties of Extracted Polymer Samples. This table should have included a column "Comparison of Values" in which the bromine content found by radioactivity measurements (column 6) was compared with the bromine content calculated from viscosimetric molecular weights (column 7). The latter calculation was based on the assumption of two bromine atoms per polymer molecule, resulting from chain termination by combination of two growing chains. The values for lines $1-3$ were: Sample No. 104-E-1, $58 \%$; No. 111-E-1, $188 \%$; No. $116-\mathrm{E}-1,166 \%$. The trend of these values is in agreement with the hypothesis that conditions leading to high degrees of polymerization also favor chain transfer."-Harry F. Pfann.

Leonor Michaelis and S. Granick. Molecular Compounds of the Quinhydrone Type in Solution.

Page 1029. In column 1, lines 10 and 14 from the end, for "phenol" read "Quinone."-Leonor Michablis.
