**James H. Brewster.** The Configuration of Atrolactic Acid. Retention of Configuration in the Acid-catalyzed Ring Opening of Stilbene Oxide.

Page 4061 *et seq.* A preliminary analysis of the problem taken up in this paper unfortunately was attributed to McKenzie and Ritchie (*Ber.*, 70B, 23 (1937)); to correct this error, the author wishes to point out that these workers made no statements on the stereochemistry of epoxide ring-opening reactions and they assigned a configuration to atrolactic acid *in agreement* with Freudenberg. Their assignment of a *threo* configuration to "α"-1,2-diphenyl-1,2-propanediol was confirmed by the work reported in this paper.—JAMES H. BREWSTER.

**Philip S. Skell and Robert C. Woodworth.** Structure of Carbene, CH<sub>2</sub>.

Page 4496. Reference (6) as now printed is incomplete and misleading; subsequent publications have led to the reassignment of the λ4050 group of emission bands to the C<sub>2</sub> molecule: A. Monfils and B. Rosen, *Nature*, 164, 712 (1949); A. E. Douglas, *Astrophys. J.*, 114, 466 (1950); B. Rosen, *Mém. soc. roy. sci. Liège*, 13, 187 (1955); K. Clusius and A. E. Douglas, *Can. J.
