

Monovalent, Clickable, Uncharged, Water-Soluble Perylene-diimide-Cored Dendrimers for Target-Specific Fluorescent Biolabeling

[*Journal of the American Chemical Society* 2011, 131, 9964–9967. DOI: 10.1021/ja2009136]. Si Kyung Yang, Xinghua Shi, Seongjin Park, Sultan Doganay, Taekjip Ha, and Steven C. Zimmerman*

Page 9966. The color and resolution of Figure 5 were significantly degraded in the publication process, such that the contrast between the surface proteins and background could not be seen in the fluorescence images. This distinction is clearly reproduced here for panels A and C of Figure 5, and the images have been improved in the online versions of the Communication.
