

Fall Meeting A. O. C. S., Oct. 20-21 to Feature Practical New Processes

LAST fall, one hundred and fifty oil and soap technologists and operators gathered in the Florentine Room of the Congress Hotel, Chicago. So intensely interesting was the program presented that it was necessary to extend the time of the meeting to include an extra session Friday afternoon and this extra session was as well attended as had been the regular sessions. A surprisingly large proportion of those attending this Fifth Annual mid-year meeting of the American Oil Chemists' Society were from far away points, and they felt well repaid for their journey. A close friend from a far distant point said to the writer, "You are building something mighty fine here at these Chicago meetings."

So the Chicago Convention Committee feels encouraged to go ahead with renewed energy to make this Sixth Annual meeting October 20-21, again in the Florentine Room of the Congress Hotel, bigger and better even than the last two splendid meetings, and a program suited and adapted to these troublous times will be presented.

The keynote of the program will be the presentation of new practical operating processes,

requiring technical control which will directly benefit these industries.

The President of the Society and the Chicago Convention Committee invite every member who knows of any new process or equipment of such nature, which may prove of interest to the Society, to send it in to Mr. W. H. Irwin, Swift & Company, Chicago, Chairman of the Chicago Convention Committee. In fact, *all* papers of interest will be received with great pleasure by the President and the Committee.

And—above all—reserve those dates, October 20th and 21st.

The Chicago Committee invites you:

To a program of surpassing interest and benefit.

To an especially arranged preview of the World's Fair.

To that annual bowling tourney.

To those intimate luncheons together—without speeches.

To a new stunt in the way of entertainment not previously attempted at any Convention.

Members and Non-Members

IN the American Oil Chemists' Society, we have one Chemical Society where membership *really* means something. Five years' chemical training is required for memberships.

We have an aggressive, working Society, presenting programs that benefit, carrying on cooperative work for the benefit of their members and of the industries which they serve; standardizing methods to the benefit, not only of the cottonseed products societies, but of all other associations of industries producing fats and oils, and in which fats and oils are employed, including the margarine and mayonnaise associations; and building for these industries, as for their entire scientific world a publication, OIL AND SOAP, in which the fat, oil, soap and related products technologist and operator may find *everything of interest*, without going to other publications.

Unselfishly this Society has performed for others in the past, asking nothing for itself.

Modest to the point of self-deprecation. But today, we are stepping out. For greater accomplishments, we need new members, and since every oil, fat, soap and related product technologist, and operator is certain to benefit himself far beyond the \$6.00 per year membership fee required, "LET'S GET TOGETHER." The Society has just published a little leaflet, calling attention briefly to the benefits of membership in the Society. Copies will be sent to every member. Of course you want *your* Society to fulfill its greatest possibilities, so when these leaflets reach you pass them on to that friend of yours, who should be a member of the SOCIETY and urge him to join.

And I sincerely urge the non-members of the American Oil Chemists' Society who read this to write in today for an application blank, and don't miss our big fall meeting in Chicago, October 20-21. You'll find a ready welcome and a program of surpassing interest.
