CHICAGO FALL MEETING

THE American Oil Chemists' Society enjoyed the most successful and interesting fall meeting in its history when it met at the Sherman Hotel in Chicago on October 6 and 7.

The technical sessions were divided into three units, the Thursday morning session (October 6) being devoted to soap, the Thursday afternoon session to fats and oils, and the Friday morning (October 7) session to a special symposium on hydrogenation. All the sessions were unusually well attended, the speakers finding an interested audience. Special interest attached to the symposium on hydrogenation, which brought together much available information on this most important subject.

The registration total was 273. A list of registrants appears elsewhere

in this issue.

The dinner and entertainment held on Thursday night took place at the College Inn, in the convention hotel. Special ringside seats had been reserved by the management at the side of the combination dance floor and skating rink. During an excellent dinner, guests enjoyed the music of Frankie Masters and his orchestra and many took advantage of the opportunity to dance. The Ice Carnival, featuring a group of accomplished skaters, was enjoyed by all. Many comments on the success of the dinner were heard in the hallway at its conclusion. Two hundred and six guests enjoyed the occasion.

Two industrial trips, arranged for Friday afternoon, attracted a large group. One excursion visited the new plant of the Kraft Cheese

Company and later stopped at the Continental Can Company plant. The other group visited the Corn Products Refining Company and the National Aluminate Company. Transportation was furnished by special chartered buses.

The industrial and laboratory exhibits arranged around the outer edge of the convention hall were especially attractive this year. The Society takes this opportunity to thank all exhibitors for the opportunity to inspect new developments in plant and laboratory equipment. It is recognized that the success of the Convention depends in no small way on the cooperation of our exhibitors.
