BOOK REVIEW

THE CHEMISTRY AND TECHNOLOGY OF MARINE ANIMAL OILS WITH PARTICULAR REFERENCE TO THOSE OF CANADA. Edited by H. N. Brocklesby, Fisheries Research Board of Canada, Ottawa, Canada. 431 pages. Price \$2.95 (Cloth-bound \$3.80).

This volume is a broad collection of information on marine oils of Canada, and others as well, including their chemistry, properties and characteristics, uses, and production methods. A concept of the scope of this book is given by the following section headings:

General Chemistry of Marine Animal Oils and Fats; Structure of Component Acids and Composition; Vitamins and Other Non-Fat Components; Metabolism of Fats; Chemical and Physical Properties of Fats and Oils; Rancidity in Marine Animal Oils; Production of Fish Oils; Refining and Processing; Industrial Utilization; Properties of Some Canadian Oils; Changes in Oils of Fisheries Products.

The Bulletin should prove very useful to the whole fish oil industry, since it is written with the thought of answering questions raised by the Industry itself. It is aimed at aiding "research and industrial chemists, production managers, plant foremen, sales engineers, oil brokers, and perhaps an executive or two." In doing this it should go a long way.

BENNETT CLARK BLEACHING CLAY

"CERTIFICATE OF ANALYSIS"

PRODUCT: BC CLAY

Uniformity **B**est
Decolorizing **E**fficient plus
Filterability **T**ops
Oil Retention .. **T**en up
"Oil Quality" ... **E**xcellent
Service **R**eputable

Total—**BETTER CLAY**
