

Why on earth should a food processor make his own emulsifier? Pound for pound of actual monoglyceride, it costs less from DPi.

When you make your own, you get only a mixture. Assaying it for monoglyceride, the active ingredient, is a time-consuming business. Furthermore, if you have to run it through the deodorizer, you may lose varying amounts. *Myverol® Distilled Monoglycerides* are added *after* deodorization. Since Myverol is virtually straight monoglyceride, there is never any doubt about the monoglyceride content of your finished product. Myverol Distilled Monoglycerides are made in several different forms, from a wide choice of food fats by *Distillation Products Industries, Rochester 3, N. Y.* Sales offices: New York, Chicago, and Memphis • W. M. Gillies and Company, Los Angeles, Portland, and San Francisco • Charles Albert Smith Limited, Montreal and Toronto.

*distillers of  
monoglycerides  
made from  
natural fats  
and oils*

Also ... vitamins A and E  
for foods and pharmaceuticals
