

AOAC meeting draws 1,190

Approximately 1,190 persons attended the Association of Official Analytical Chemists meeting during October in Washington, DC, at which the major news was the announcement that AOAC would institute a \$10 membership fee.

William W. Wright, new president of the group, announced the fee in his presidential speech. Dr. David MacLean, who joined AOAC as deputy executive director in September, has been tabbed successor to Dr. William Horwitz as AOAC executive director. That change is 12 to 18 months away. Horwitz is a deputy associate director in FDA's Bureau of Foods and is not an AOAC employee. MacLean is an AOAC employee and the change was viewed by *Food Chemical News* as part of AOAC's effort to establish administrative independence from federal agencies.

AOAC also began publishing this past fall a bimonthly newsletter, *The Referee*, for its members.

GYRATORY SCREEN SIFTERS

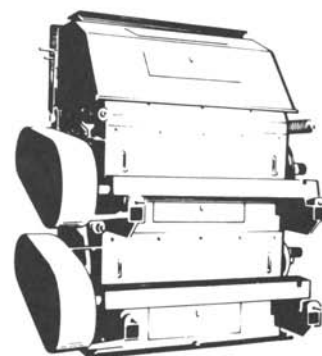

For high screening efficiency plus lightweight sanitary magnesium alloy construction. They provide the ultimate in sanitation, improved product quality, and lower operating costs.

CONTINUOUS BUCKET ELEVATORS

For gentle handling of your product to prevent crushing, cracking, or breaking. The commodity is poured into the self-cleaning buckets rather than scooped.

SINGLE OR 2-HI ROLLER MILLS

For granulating and gradual size reduction of food products and chemicals. These high capacity mills produce less fines, reduce pollution problems, and use less horsepower.
