Perkin Communications

Communications will be published in *Perkin Transactions I* from the beginning of 1989. These will consist of preliminary accounts of novel and significant work of exceptional interest in any branch of organic, bio-organic, or physical organic chemistry. Material of wide general appeal is more appropriately submitted to *Chemical Communications*; *Perkin Communications* are intended for work of a more specialist nature. Where relevant, typical experimental data will be included; otherwise the principles governing acceptance are essentially the same as for *Chemical Communications*. Where appropriate, authors should provide corroborative material, not for publication, as supplementary information for referees. Full papers based upon communications will be acceptable subsequently provided that they represent a substantial amplification and extension of the original material.

Individual articles should be as brief as possible [normally less than 1 200 words (*ca.* 2 printed pages) or the equivalent]. The summary should be restricted to one sentence only. Otherwise, the format and style of presentation should be the same as for a full paper.

Times to publication will be similar to those for *Chemical Communications*. In order to achieve this, failure of an author to produce a revised script in response to referees' comments within 4 weeks will be regarded as a withdrawal of the communication. Furthermore, proof corrections received more than 2 weeks after despatch of proofs by the printer will not be incorporated.

NOTE: An asterisk in the heading of each paper indicates the author who is to receive any correspondence.
