

BIOTRANSFORMATIONS:

A survey of the Biotransformations of Drugs and Chemicals in Animals

Volume 1

Edited by David R. Hawkins, *Huntingdon Research Centre*

The series has been devised to provide an up-to-date survey of the literature on the biotransformation of pharmaceuticals, pesticides, food additives, and environmental and industrial chemicals in animals. The objective is to provide a comprehensive database which will allow an increased awareness of patterns in species differences and the influence of chemical structure on biotransformation pathways. The ability to predict biotransformation is the ultimate goal which could contribute to the discovery and development of new products. The material has been collated into chemical classes but an additional feature is the definition and allocation of key functional groups for each compound. The functional groups selected are those commonly associated with biotransformation. Indexing these functional groups provides ready access to reports on compounds containing common structural features. An additional index of biotransformation processes and compound names further increases the accessibility of relevant information.

Contents:

Key Functional Groups; An Overview; Hydrocarbons: Aliphatic, Aromatic (Monocyclic/Bicyclic); Polycyclic Aromatic Hydrocarbons: Unsubstituted, Hydroxylated Derivatives, Substituted; Alkenes, Halogenoalkanes, and Halogenoalkenes: Alkenes (Epoxides), Halogenoalkanes, Halogenoalkenes; Acyclic Functional Compounds; Substituted Monocyclic Aromatic Compounds: Halogenoaryl, Phenols, Nitroaryl/Nitrophenols, Carboxylic Acids/Esters, Ketones, Aryl Amines, Benzhydryls, Arylalkylamines; Miscellaneous Aromatics; Heterocycles: Monocyclic Five-membered, Monocyclic Six-membered, Monocyclic Seven-membered, Bicyclic/Tricyclic; Functional Nitrogen Compounds; Nitrosamines; Amino Acids and Peptides; Steroids; Miscellaneous: Inorganic and Organometallic, Pyrethroids, Organophosphorus Compounds, Sulphur Compounds; Compound Index; Key Functional Group Index; Reaction Type Index

ISOTOPES: ESSENTIAL CHEMISTRY AND APPLICATIONS II

Edited by J. R. Jones, *University of Surrey*

In the years that have elapsed since the RSC published *Isotopes: Essential Chemistry and Applications* in 1980 there have been many changes and developments which warrant publication of this edition. This book covers the synthesis of a wide range of isotopically labelled compounds, the analytical methods used and many important applications.

Contents:

Organic Synthesis with Short-lived Positron-emitting Radioisotopes; Radioiodination Techniques; The Radiochromatography of Labelled Compounds; Modern Spectrometric Methods for the Analysis of Labelled Compounds; Localization and Quantitation of Radioactivity in Solid Specimens Using Autoradiography; Isotope Shifts in NMR Spectroscopy – Measurement and Applications; The Use of Stable Isotopes in Medicinal Chemistry; Radiopharmaceuticals; Isotopes in Molecular Biology; Industrial Applications of Radioisotopes.
