The purpose of the Symposium is to demonstrate the vitality and diversity of the field of organic chemistry through presentations of outstanding research at the forefront of the discipline. The program features the Roger Adams Award Address by E. J. Corey and lectures by ten other speakers. Also there will be two sessions for contributed posters. A book of Abstracts of the talks and the posters will be given to all registrants at the meeting. (This Abstract book may be obtained afterwards by sending \$15.00 plus a self-addressed 10" × 13" envelope to William R. Roush, Secretary–Treasurer, ACS Division of Organic Chemistry, Department of Chemistry, Indiana University, Bloomington, IN 47405.)

Meals and air-conditioned dormitory rooms will be available on the campus at a reasonable cost. On Wednesday evening, there will be an outdoor Bar-B-Que followed by the College National Rodeo Championships. Special tours and various cultural, athletic and outdoor activities will be available during the afternoons.

Pre-registration is required. Prior to May 15, the registration fees are: \$145 for members of the ACS Organic Division, \$155 for other ACS members, \$170 for non-members of the ACS, \$50 for postdoctoral fellows, \$25 for students, and \$25 for guests accompanying a registrant. What can a MARPAT do?

*...capture both Markush structures
and patent information*

MARPAT[®], the structure-searchable patent database from CAS, gives you online access to chemical patent documents that contain Markush (generic) structures. MARPAT is available only on STN International[®].

Search MARPAT in connection with the CAS REGISTRY File of more than 11 million substances. A patent search in only REGISTRY may not be complete—MARPAT can supply unique answers for specific and generic structures. On STN, you'll find other files important for patent searching as well.

With the information MARPAT provides, who knows? You may just capture the market.

Yes! MARPAT has captured my interest. Please send a brochure and a MARPAT poster—FREE!

METHODS IN ORGANIC SYNTHESIS

Keep up-to-date with developments in this vital area!

Methods in Organic Synthesis (MOS) is now established as a major reference source designed to meet the requirements of synthetic organic chemists.

Each monthly issue contains about 200 items including titles, bibliographic details and reaction schemes. Text is included when additional information is required. There are five indexes in every issue: an Author Index, and a Subject Index split into four sections (Product, Reaction, Reactant and Reagent).
