

JOURNAL OF THE CHEMICAL SOCIETY

Expanding the Coverage of the Perkin Journals

The Perkin Editorial Board are anxious to extend the coverage of *Perkin Transactions* to represent more fully the growing involvement of organic chemistry with biological problems and to reflect the current high quality of **medicinal and agricultural chemistry** being carried out in academic and industrial laboratories. The range of subject matter acceptable to the Perkin journals has therefore been modified as follows.

Perkin Transactions 1: all aspects of organic and bio-organic chemistry. These include synthetic organic chemistry of all types, organometallic chemistry, chemistry and biosynthesis of natural products, the relationship between molecular structure and biological activity, the chemistry of polymers and biological macromolecules, and medicinal and agricultural chemistry where there is originality in the science.

Perkin Transactions 2: physicochemical aspects of organic, organometallic, and bio-organic chemistry including kinetic, mechanistic, structural, spectroscopic, and theoretical studies. Such topics include structure—activity relationships and physical aspects of biological processes and of the study of polymers and biological macromolecules.
