

Journal of Chemical Research, Issue 9, 1987

Other papers in the subject areas covered by *J. Chem. Soc.* are published in synopsis/microform format in *J. Chem. Research*. For the benefit of readers of *J. Chem. Soc.*, the contents list of *J. Chem. Research (S)*, Issue 9, is reproduced below.

- 277 Unexpected Formation of a Heterocyclic Spiran in the Michael Reaction of Ascorbic Acid with Acrolein **Kurt Eger, Gerd Folkers, Werner Zimmermann, Rainer Schmidt, and Wolfgang Hiller**
(M 2352)
- 278 Synthesis of New Highly Substituted Flavones, occurring in *Ageratum houstonianum* **Virinder S. Parmar, Rajni Jain, and Suddham Singh**
(M 2301)
- 280 Cyclopalladated Complexes of Aromatic and Heteroaromatic Ligands containing Unsaturated Nitrogen or Sulphur as Donor Atoms **Robert C. Davis, Trevor J. Grinter, Derek Leaver, Robert M. O'Neil, and (in part) Gordon A. Thomson**
(M 2316)
- 282 Nitration Studies with β -Dimethylaminocon-5-enine (Conessine) **Kamlesh K. Bhutani and Raj M. Vaid**
(M 2332)
- 284 N.m.r. Properties and Synthesis of Ring-methylated 1,4-Dihydronicotinamides and the Corresponding Pyridinium Salts. Correlation of N.m.r. with *ab initio* STO-3G Results. **Jan D. Bossaerts, Roger A. Dommissie, Frank C. Alderweireldt, and Paul Geerlings**
(M 2360)
- 286 Photoinduced Coupling of Quinones to Covalently Linked Porphyrin-Tyrosine Compounds and its Application to the Synthesis of Quinone-capped Porphyrins **Atsuhiko Osuka and Kazuhiro Maruyama**
(M 2401)
- 288 Chemistry of Atractyligenin. Part 2. Photochemical Transformation of Atractyligenin **Lorenzo Camarda, Leopoldo Ceraulo, Mirella Ferrugia, Vincenzo Sprio, and Tullio Caronna**
(M 2385)
- 290 Spirodienones. Part 6. Spiro- γ -lactones from 1-Benzyltetrahydro-1-naphthoic Acids and from a 1-Benzyltetrahydroisoquinoline-1-carboxylic Acid **Ian G. C. Coutts, John A. Hadfield, and Patrick R. Huddleston**
(M 2472)
- 292 The Synthesis and Chemistry of Azolenines. Part 7. ^{13}C N.m.r. Spectra of 3,5-Diaryl-1*H*-pyrrole-2-carboxylic Esters, and -1,2-Dicarboxylic Esters: Complete Assignments and Substituent Chemical Shift Effects of 3- and 5-Aryl Ring Substituents **Margaret W. L. Chung and Michael P. Sammes**
(M 2501)
- 294 Modelling of the Interactions of Metal Cations with Soil Organic Matter. Part 2. Thermodynamic Stability of Iron(III) and Manganese(II) Complexes with Three Dihydroxybenzoic Acids **Christian Gerard, Rosaline Njomgang, Jean-Claude Pierrard, Jean Rimbault, and René P. Hugel**
(M 2516)
- 296 'Ene'-type Reaction of the Pummerer Rearrangement Product derived from 4-Chlorophenyl Methyl Sulphoxide: Synthesis of Some Insect Sex Pheromones **Hiroyuki Ishibashi, Hajime Komatsu, and Masazumi Ikeda**
(M 2548)
- 298 A Kinetic Template Effect in the Nickel-catalysed Reactions of a 2-(2-Bromophenyl)benzimidazole with Tertiary Phosphines. X-Ray Crystal Structure of Triphenyl-[2-[1-(2-bromobenzyl)benzimidazol-2-yl]phenyl]phosphonium Bromide Di(chloroform) Solvate **David W. Allen, Paul E. Cropper, and I. W. Nowell**
(M 2562)
- 300 ν -Triazolines. Part 29. 1*H*-1,2,3-Triazole-4-carbaldehydes and Isoxazole-4-carbaldehydes from 4,5-Dihydro-4-methylene-5-morpholino-1*H*-1,2,3-triazoles and -isoxazoles **Nicoletta Almirante, Francesca Clerici, and Emanuela Erba**
(—)
- 302 Asymmetric Syntheses. Part 4. Hydroxy β -Diketones, Furan-3(2*H*)-one, 2,3-Dihydropyran-4-one, and Dioxoacid Derivatives from Diacylacetates **Giorgio Bianchi, Mario Grugni, and Aldo Tava**
(—)
- 304 α -Colubrine Revisited (Proof of Structure) **Jacqueline M. Culver and Malcolm Sainsbury**
(—)
- 306 Kinetics of Oxidation of Some Aldoses by Tetrachloroaurate(III) **Kalyan Kali Sen Gupta, Archana Tarafder, and Ambikesh Mahapatra**
(—)
- 308 Enzyme-catalysed Selective Ester Hydrolysis of Aspartyl and Glutamyl Dipeptide Benzyl Esters **Shui-Tein Chen and Kung-Tsung Wang**
(—)
- 310 Stereoselective Reactions of Chiral Enamines and (Ethoxycarbonyl)nitrene **Stefania Fioravanti, M. Antonietta Loreto, Lucio Pellacani, and Paolo A. Tardella**
(—)
- 312 Structure of the Cyclononatetraenyl Anion and Some of its Benzannelated Derivatives. A Semiempirical MNDO and AM1 Study **Andrzej Sygula, Ulf Edlund, and Peter W. Rabideau**
(—)
- 314 Electro-oxidation of Terpenes. Anodic Oxidation of (—)- α -Phellandrene **Vincente Montiel, Marcelo-Lopez Segura, Roberto Duo, Antonio Aldaz, and Fructuoso Barba**
(M 2536)

N.B. The numbers in parentheses, prefaced by *M*, indicate the first frame occupied by the *full-text version* of the paper in *J. Chem. Research (M)*. Where no such number is given, the paper as published in *J. Chem. Research (S)* is complete in itself, and there is no extra material in Part *M*.

NEW BOOKS FOR ORGANIC CHEMISTS AND BIOCHEMISTS

Enzyme Mechanisms

Edited by M. Page
Huddersfield Polytechnic

Hardcover approx 560pp
ISBN 0 85186 947 5
Price £95.00 (\$183.00)
RSC Members price £60.00

The mechanisms of enzyme catalysed reactions are now understood at the molecular level. Understanding how enzymes work is the first step towards the successful application of enzymes as catalysts in large scale synthesis both in the laboratory and industry. The design of new drugs as enzyme inhibitors is advanced by a knowledge of the reaction mechanism.

This book has several contributors who are experts in their own field, and each emphasises the important role that mechanisms play in building the bridges between chemistry and the biological sciences.

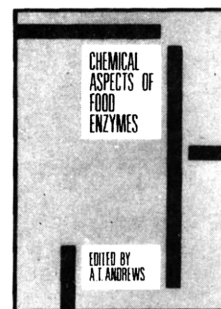

Enzyme Mechanisms discusses the chemistry and mechanisms of enzyme catalysed reactions and is suitable for readers of advanced undergraduate level and above.

Chemical Aspects of Food Enzymes

The use of food enzymes to facilitate an industrial manufacturing process has many attractions compared to purely chemical reaction mechanisms. These include the speed of reaction, the fact that the reactions take place under mild conditions and, most importantly, that they are highly specific, often stereospecific. The mild conditions reduce energy costs and the high specificity minimises the need for downstream processing. There are problems however with enzyme stability, enzyme reactor poisoning and enzyme hygiene. The efficiency of the reaction can be reduced by build-up of product concentration and the adsorption of inactive components such as lipids or other biopolymers.

The manufacture of cheese, beer, bakery products and other fermented produce employs enzymes in their earliest applications. The use of enzymes in a more sophisticated manner can present difficulties with regard to the huge tonnages of materials that need to be processed.

This publication reviews current applications of enzymes in food processes. It should stimulate interest and point the way forward in this area of vital importance.
