Symposium on Electrochemical Methods in Extractive Metallurgy

The Industrial Electrolytic Division of the Electrochemical Society Inc., is holding a symposium on electrochemical methods in extractive metallurgy as part of the 154th ECS Meeting, Pittsburgh, Pa, on 15–20 October 1978. The purpose of this symposium is to highlight the significant role played by electrochemistry in the winning of many industrially important metals and to emphasize directions for utilizing electrolytic steps to improve the efficiency of metals extraction from conventional mineral resources and to make possible the economical exploitation of new resources.

Physico-chemical Hydrodynamics (the Levich Conference)

A second conference, along similar lines to that held in Oxford, England (July 1977) to celebrate the 60th birthday of Professor Benjamin Levich, will be held at Purdue University, West Lafayette, Indiana, USA from 30 October to 1 November 1978. Subjects covered will include: electrochemical processes in science and industry, transport processes in liquids and gases and across phase interfaces, capillarity and the mechanics of interfaces, the properties and behaviour of dispersions, electrophoresis and other electrical effects in liquids, interactions of turbulence and chemical kinetics, nucleation and the growth of crystals, and relevant computational procedures.
