

CONTENTS OF NEXT ISSUE

PMM Vol. 33, №4, 1969

- Kh. A. RAKHMATULIN: On propagation of waves in multicomponent media
- M. V. LUR'E: Use of a variational principle for the study of propagation of surfaces of discontinuity in a continuous medium
- M. E. KUTSER and U. K. NIGUL: Method of analysis of frontal discontinuities, generated by a pressure wave in membranes and shells
- O. S. RYZHOV and E. D. TARENT'EV: On the application of the explosion analogy to the analysis of hypersonic flows
- K. A. BEZHANOV: Diffraction of a shock wave at a wedge, moving with supersonic speed
- S. S. KALMYKOVA and V. I. KURILKO: On the theory of diffraction of electromagnetic waves in active media
- Ia. I. SEKERZH-ZEN'KOVICH: On composite steady gravitational waves of finite amplitude
- O. V. VOINOV: On the motion of two spheres in an ideal fluid
- L. M. ZUBOV: Approximate theory of buckling of thin plates made of a semilinear material for affine initial deformation
- V. A. SHACHNEV: On the correctness of some problems of the membrane theory of shells of negative curvature
- L. A. FIL'SHTINSKII: Complete systems of particular solutions in the theory of shallow shells
- N. N. KRASOVSKII and A. I. SUBBOTIN: On optimal strategies in a linear differential game
- A. B. KURZHANSKII and Iu. S. OSIPOV: On problems of guidance with constrained coordinates
- A. I. SOLIANIK and F. L. CHERNOUS'KO: Optimization of the observation process with random disturbances
- A. M. TER-KRIKOROV: On the asymptotic character of motion of a conservative system under the action of an aperiodic perturbing force
- S. Ia. STEPANOV: On the multitude of stationary motions of a satellite-gyrost at in a central Newtonian force field and their stability
- L. A. KOMRAZ: Dynamics of an electromagnetic triggering regulator with two impulses per period
- V. D. ANDREEV and O. F. MALAKHOVA: On the determination of the coefficients of expansion of the gravitational potential of the earth into a Legendre polynomial
- G. A. GRINBERG and V. A. KOSS: On the solution of diffusion type problems for expanding or contracting domains, whose form changes with time without maintaining similarity
- A. N. GUZ' and V. T. GOLOVCHAN: Solution of two-dimensional, doubly periodic problems of the theory of steady oscillations of visco-elastic bodies
- B. E. POBEDRIA: On the solvability of problems of the theory of elasticity of the contact-type
- Iu. S. NAISHTUT: On the analysis of shells with holes
- V. A. PAL'MOV: On a model of a medium with complex structure
- Ia. S. PODSTRIGACH and P. R. SHEVCHUK: Variational form of the equations of the theory of thermodiffusive processes in a deformable solid body
