

CONTENTS OF NEXT ISSUE
PMM Vol. 42, Issue 5, 1978

- V. A., ZHELNOROVICH and L. I. SEDOV: On variational derivation of the equations of state for a material medium and the gravitational field
- V. F. ZHURAVLEV: Equations of motion of mechanical systems with ideal one-sided constraints
- V. A. BODNER, N. E., RODNISHCHEV and E. P. IURIKOV: On optimization of systems describable by stochastic differential equations
- A. V. KARAPETIAN: On stability of stationary motions of Chaplygin's nonholonomic systems
- V. N. BELYKH and V. I. NEKORKIN: Qualitative structures and bifurcations generated by the nonlinear equation of third-order phase synchronization
- M. I. FEIGIN: On the structure of S-bifurcational boundaries of piece-wise continuous system
- A. I. NEISHTADT: Bifurcations of the phase pattern of a system of equations occurring in the problem on the loss of stability of auto-oscillations near the resonance 1:4
- V. I. GNESIN, V. L. GRODZINSKII and G. A. SOKOLOVSKII: Equations of gas dynamics in the non-inertial deformable system of coordinates
- A. A. BORZKY and G. P. CHEREPANOV: Plane problem of the theory of convective heat and mass transfer
- S. A. REGIRER and N. Kh. SHADRINA: On models of thixotropic fluids
- A. BEGMATOV: On a nonlinear integro-differential equation of the theory of non-stationary filtration with unknown boundary
- N. R. SIBGATULLIN, N. A. SLEZKIN and E. A. SOROKIN: On the stability of an aerostatic support with elastic barrier
- M. A. GRINFEL'D: Ray method of calculating the intensity of wave fronts in a non-linearly elastic material
- M. I. GUSEIN-ZADE: Asymptotic analysis of boundary and initial conditions in the dynamics of thin shells
- V. B. PORUCHIKOV: Solution of a dynamic problem of the theory of elasticity for regions with corners and with mixed boundary conditions
- L. M. ZUBOV, and A. N. RUDEV: Homogeneous solutions for an initially stressed elastic plate
- N. I. MIRONENKO: On the state of stress of a strip weakened by two like circular cavities situated in the transverse direction
- A. N. GUZ: On stability of elastic compressible bodies under all-around compression
- A. N. VEISSENBERG: Algorithm of construction of Liapunov's function in the form of a sum of squares of integrals
- N. V. ROSHCIN: Dangerous stability boundaries in the model of Lorentz
- B. N. SKRIABIN: Generation of a limit cycle from "sewed-together foci"
- A. Z. ZINCHENKO: On the analysis of hydrodynamic interaction for drops or small Reynolds numbers
