

JOURNAL OF APPLIED MATHEMATICS AND MECHANICS

CONTENTS OF NEXT ISSUE

Volume 56, No. 3, 1992

- G. G. CHERNYI: The asymptotic method in problems on the motion of bodies in a melting medium
- A. I. RYLOV: On monotonicity properties of some plane vortex flows of an incompressible fluid and subsonic gas flows
- V. N. GOLUBKIN and V. V. NEGODA: On increasing the aerodynamic property of wings of small aspect ratio for hypersonic velocities
- N. Yu. KOLPAKOV and V. I. KOLESNICHENKO: Influence of the meridional eddy current on the azimuthal rotation of a fluid
- R. R. GADYL'SHIN: The method of matched asymptotic expansions for the problem of the acoustic Helmholtz resonator
- A. V. MARCHENKO: On the propagation of fractures in a drifting ice sheet
- L. V. PETUKHOV: Dual estimates in the design of elastic structures
- V. Ya TERESHCHENKO: Realization algorithm and error estimates of the variational boundary element method in problems of the theory of elasticity
- L. D. AKULENKO and G. B. KOSTIN: The perturbation method in dynamic problems of non-homogeneous elastic bars
- B. V. YERMOLAYEV: Application of generalized functions to the problem of elastic vibrations of a composite bar
- P. E. TOVSTIK: Free, high-frequency oscillations of anisotropic plates of variable thickness
- V. P. LEVITSKII and V. M. ONYSHKEVICH: Heat transfer through a stiff (rigid) disc pressed into an elastic half-space
- A. G. KOLPAKOV: On the problem of thermoelasticity of non-homogeneous plates
- I. V. PANFEROV: Stresses in a transversely isotropic elastic conical pipe with constant thickness under thermal loading
- I. P. GETMAN and B. A. MOL'KOV: On effective characteristics of piezoactive composites with cylindrical inclusions
- V. Z. PARTON and M. L. FIL'SHTINSKII: Stationary wave process in a piezoelectric layer and half-layer, weakened by tunnel-like cuts (antiplane deformation)
- V. V. SIL'VESTROV: Effective solutions of fundamental quasi-periodic problems of the theory of elasticity for a plane with cuts along a straight line
- G. V. GORR: A new solution of the generalized problem on the motion of a body with a fixed point
- O. V. MUKHTAROVA and L. P. SMIRNOV: The influence of surface tension gradient on the motion of a spherical and deformable drop
- V. B. GORSKII: On two-dimensional vortex motion of a viscous incompressible fluid
- A. S. SAVIN: Generation of surface waves by a floating vortex ring
- V. A. VOL'PERT and B. S. EL'KIN: Existence and stability of stationary regimes of combustion in a flow
- G. P. MIRENKOVA and E. G. SOSNINA: Stresses on the surface of a rigid needle in an orthotropic elastic medium
- M. A. SUMBATYAN and E. A. TROYAN: Restoration of the shape of a convex defect by a scattered wave field in the ray approximation
