

JOURNAL OF APPLIED MATHEMATICS AND MECHANICS
CONTENTS OF NEXT ISSUE
Volume 58, No. 3, 1994

- A. A. RUMYANTSEV: The Poincaré–Chetayev equations
- A. V. KARAPETYAN: The specifics of the application of Routh's theory to systems with differential constraints
- L. D. AKULENKO: Asymptotic analysis of dynamic systems subjected to high-frequency actions
- T. D. KONASHENKOVA and N. K. MOSHCHUK: Stochastic mechanical systems with uncontrollable constraint
- A. D. MOROZOV: Resonances and chaos in parametric systems
- I. V. BOIKOV: Aizerman's problem
- A. V. KIRGETOV: The problem of constructing the resolving Lyapunov transformation
- A. P. IVANOV: Dynamics of systems in the vicinity of tangential impact
- A. P. MARKEYEV: Study of stability of periodic motion of a solid body in the presence of impacts with a horizontal plane
- V. I. VOROTNIKOV: Control by angular motion of a solid body in the presence of obstacles
- R. R. GADYL'SHIN: Systems of acoustic resonators in a quasistationary regime
- B. S. CHEKIN: Inclined penetration of a thin wedge into an incompressible fluid
- S. V. ZHLUKTOV, G. A. TIRSKII and S. V. UTUZHNIKOV: Thermochemically non-equilibrated viscous shock layer in the vicinity of long truncated cones
- V. S. ZHIROV: Optimization of wing mass
- Ye. I. SVESHNIKOVA: Shock waves in a weakly anisotropic, elastic incompressible material
- A. V. SHANIN: Application of the methods of representations theory to problems of excitation and reflection of conical waves
- I. I. VOROVICH, D. A. POZHARSKII and M. I. CHEBAKOV: The thermoelasticity problem on a moving stamp, taking into account heat generation through friction
- A. A. IL'YUSHIN and I. A. KIIKO: A novel formulation of the problem of flutter of a shallow shell
- A. A. KOSMODEM'YANSKII: Calculation of the boundary derivatives of the first and second boundary-value problems for Poisson's equation
- P. V. TRET'YAKOV: Diffraction of an arbitrary acoustic wave by a block
- V. S. POLENOV and A. V. CHIGAREV: Wave propagation in a non-homogeneous viscoelastic medium with initial stresses
- A. E. PURO: Application of the methods of integral photoelasticity to the determination of stresses in a cubic monocrystal
