

**Viscosity of Water + *tert*-Butyl Alcohol (2-Methyl-2-propanol) Mixtures at Low Temperatures and High Pressure.**  
 Kenneth R. Harris\* and Lawrence A. Woolf, *J. Chem. Eng. Data* 2009, 54, 581–588.

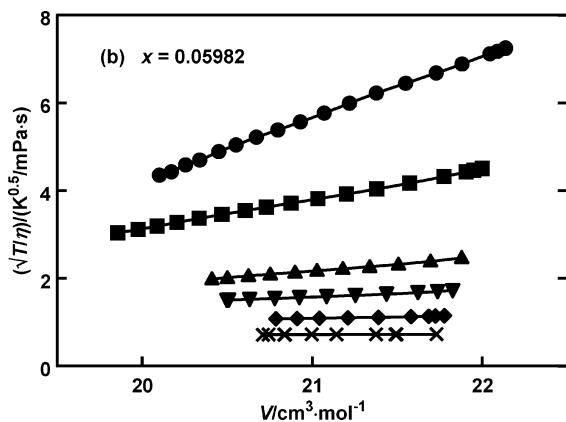

Pages 582 to 585. There was an error in the calculation of the densities at  $x = 0.05982$  from the Tait equation parameters of Table 2 in the spreadsheets used to construct Table 3. (The parameters in Table 2 are correct.) This affected the isotherms at (0, 5, 15, and 25) °C. The resultant relative change to the viscosities is small, at most –1.0 % at 15 °C and 349.8 MPa. Revised values are tabulated below. Change is also required to the coefficients for eq 2 at  $x = 0.05982$  (Table 4) in Figure 2(b) and its caption. The discussion of the results is unaffected.
