

Announcement

Fifth International Conference on Numerical Methods in Fluid Dynamics

June 28–July 2, 1976

Twente University of Technology Enschede, The Netherlands

The subject of the conference is the numerical solution of fluid-dynamical problems in such areas as Meteorology, Oceanography, Geophysics, Aerodynamics and hydrodynamics, Magneto-hydrodynamics, and Biomechanics. All aspects of fluid dynamics will be included, but special interest will be attached to the improvement of computational methods and the development of new methods.

Eight general lectures will be presented by invited speakers. About 50 contributed research papers of 20 minutes each (15 minutes for presentation and 5 for discussion) can be accepted. An International Papers Committee will be responsible for the selection of contributed papers on the basis of abstracts submitted by the authors. The Conference Proceedings will contain the complete texts of all talks and will be published subsequently by Springer-Verlag as a volume of lecture notes in physics.

All prospective participants should communicate their names and addresses to the conference office:

ICFD 1976,
c/o DOB—THT,
Postbus 217,
ENSCHDEDE,
The Netherlands.
