

Continued from inside back cover

- 1810 **Tracking discontinuities in hyperbolic conservation laws with spectral accuracy**
H. Touil, M.Y. Hussaini, and M. Sussman
- 1827 **Accurate monotonicity- and extrema-preserving methods through adaptive nonlinear hybridizations**
William J. Rider, Jeffrey A. Greenough, and James R. Kamm
- 1849 **A nonstiff, adaptive mesh refinement-based method for the Cahn–Hilliard equation**
Hector D. Ceniceros and Alexandre M. Roma
- 1863 **Efficient and accurate numerical methods for the Klein–Gordon–Schrödinger equations**
Weizhu Bao and Li Yang
- 1894 **Constitutive equations for discrete electromagnetic problems over polyhedral grids**
Lorenzo Codecasa and Francesco Trevisan
- 1919 **Additive Schwarz-based fully coupled implicit methods for resistive Hall magnetohydrodynamic problems**
S. Ovtchinnikov, F. Dobrian, X.-C. Cai, and D.E. Keyes
- 1937 **A volume of fluid method for a two-dimensional plasma expansion problem**
K.-C. Le Thanh, C. Parzani, and M.-H. Vignal
- 1961 **Discontinuous Galerkin methods with plane waves for time-harmonic problems**
Gwénaél Gabard
- 1985 **Link molecule method for quantum mechanical/molecular mechanical hybrid simulations**
Yoshimichi Nakamura, Norihiko Takahashi, Masakuni Okamoto, Tsuyoshi Uda, and Takahisa Ohno
- 1994 **Implicit solution of the unsteady Euler equations for high-order accurate discontinuous Galerkin discretizations**
Li Wang and Dimitri J. Mavriplis
- 2016 **IMEX extensions of linear multistep methods with general monotonicity and boundedness properties**
Willem Hundsdorfer and Steven J. Ruuth
- 2043 **A mixture formulation for numerical capturing of a two-phase/vapour interface in a porous medium**
L.J. Bridge and B.R. Wetton
- 2069 **An adaptive homotopy multi-grid method for molecule orientations of high dimensional liquid crystals**
Ping Lin and Thomas Richter
- 2083 **A characteristic-based shock-capturing scheme for hyperbolic problems**
Guo-Hua Tu and Xiang-Jiang Yuan
- 2098 **An immersed boundary method for compressible flows using local grid refinement**
M.D. de Tullio, P. De Palma, G. Iaccarino, G. Pascazio, and M. Napolitano
- 2118 **The immersed boundary method: A projection approach**
Kunihiko Taira and Tim Colonius
- 2138 **A coupling interface method for elliptic interface problems**
I-Liang Chern and Yu-Chen Shu
- 2175 **Initial-value approach to study the inertio-gravity waves without the ‘traditional approximation’**
Akira Kasahara
- 2198 **An efficient and robust particle-localization algorithm for unstructured grids**
A. Haselbacher, F.M. Najjar, and J.P. Ferry
- 2214 **A relaxation-projection method for compressible flows. Part II: Artificial heat exchanges for multiphase shocks**
Fabien Petitpas, Erwin Franquet, Richard Saurel, and Olivier Le Metayer
- 2249 **Engineering local optimality in quantum Monte Carlo algorithms**
Lode Pollet, Kris Van Houcke, and Stefan M.A. Rombouts
- 2267 **Diffusion generated motion of curves on surfaces**
Barry Merriman and Steven J. Ruuth

(Continued on following page)

Continued from preceding page

- 2283 **3D simulations of early blood vessel formation**
F. Cavalli, A. Gamba, G. Naldi, M. Semplice, D. Valdembri, and G. Serini
- 2301 **Interface reconstruction with least-squares fit and split advection in three-dimensional Cartesian geometry**
E. Aulisa, S. Manservigi, R. Scardovelli, and S. Zaleski
- 2320 **An efficient, scalable numerical algorithm for the simulation of electrochemical systems on irregular domains**
Matthew Buoni and Linda Petzold
- 2333 **Development of arbitrary-order multioperators-based schemes for parallel calculations. 1: Higher-than-fifth-order approximations to convection terms**
Andrei I. Tolstykh
- 2354 **Estimation of Fekete points**
E. Bendito, A. Carmona, A.M. Encinas, and J.M. Gesto
- 2377 **Finite difference approximations of first derivatives for three-dimensional grid singularities**
Herwig A. Grogger
