

*Continued from outside back cover*

- 9138 **Removing the stiffness of elastic force from the immersed boundary method for the 2D Stokes equations**  
T.Y. Hou and Z. Shi
- 9170 **Dynamically coupled fluid–body interactions in vorticity-based numerical simulations**  
J.D. Eldredge
- 9195 **A Lagrangian particle method for the simulation of linear and nonlinear elastic models of soft tissue**  
S.E. Hieber and P. Koumoutsakos
- 9216 **Vortex particle methods in aeroacoustic calculations**  
S. Huberson, E. Rivoalen and S. Voutsinas
- 9241 **A conservative approximation to compressible two-phase flow models in the stiff mechanical relaxation limit**  
V. Deledicque and M.V. Papalexandris
- 9271 **LES approach for high Reynolds number wall-bounded flows with application to turbulent channel flow**  
C. Pantano, D.I. Pullin, P.E. Dimotakis and G. Matheou
