

Continued from outside back cover

- 2552 **Simulation of solid–fluid mixture flow using moving particle methods**
S. Zhang, S. Kuwabara, T. Suzuki, Y. Kawano, K. Morita and K. Fukuda
- 2566 **Sobolev gradient approach for the time evolution related to energy minimization of Ginzburg–Landau functionals**
N. Raza, S. Sial and S.S. Siddiqi
- 2572 **Energy minimization related to the nonlinear Schrödinger equation**
N. Raza, S. Sial, S.S. Siddiqi and T. Lookman
- 2578 **Faster convergence and higher accuracy for the Dirichlet–Neumann map**
J. Helsing
- 2587 **Simulating the dynamics of flexible bodies and vortex sheets**
S. Alben
- 2604 **Explicit time-reversible orbit integration in Particle In Cell codes with static homogeneous magnetic field**
L. Patacchini and I.H. Hutchinson
- 2616 **A well-conditioned augmented system for solving Navier–Stokes equations in irregular domains**
K. Ito, M.-C. Lai and Z. Li
- 2629 **Order- N cluster Monte Carlo method for spin systems with long-range interactions**
K. Fukui and S. Todo
- 2643 **Design of piezoelectric actuators using a multiphase level set method of piecewise constants**
Z. Luo, L. Tong, J. Luo, P. Wei and M.Y. Wang
- 2660 **Modeling merging and breakup in the moving mesh interface tracking method for multiphase flow simulations**
S.P. Quan, J. Lou and D.P. Schmidt
- 2676 **Discontinuity detection in multivariate space for stochastic simulations**
R. Archibald, A. Gelb, R. Saxena and D. Xiu
- 2690 **A triple level finite element method for large eddy simulations**
W. Liu
