

CITEALERT

Your article has now been cited!

What is CiteAlert?

CiteAlert is an alert by email designed to support authors by keeping them up-to-date with the latest citations made to any article that they have published since 2005.

CiteAlert ensures that authors are aware of new articles related to their research. www.elsevier.com/CiteAlert

How do you become eligible?

- Your article is indexed by Scopus
- Your article is referenced in a newly published article on ScienceDirect

Facts:

- No sign-up necessary
- The service is unique, free and automatic
- Self-citations not included

- Notifications include single cited or multi-cited articles
- Weekly CiteAlert notifications are sent to authors whose articles have been cited that week.

Benefits:

- Researchers gain professional recognition and exposure for their work and gain insight into how their research has influenced the work of other researchers. This insight, in turn, can advance the author's research and lead to valuable new collaborations.
- Authors are now able to find out when their articles have been cited and who has cited them.
