

## Announcement

### CTAC-83: Computational Techniques and Applications Conference

*The University of Sydney, Sydney, Australia*

August 28-31, 1983

The aim of this conference is to provide an interactive forum for mathematicians, engineers, and scientists interested in the three aspects of computation: analysis, techniques, and applications.

Computational techniques stressed will include the finite difference, finite element, boundary element, and spectral methods. Applications can be from any area but we anticipate such physical phenomena as fluid flow, heat transfer, solid mechanics, geomechanics, and chemical kinetics will be well represented.

Abstracts and requests for further information should be sent to

Dr. C. A. J. Fletcher,  
CTAC-83, Department of Mechanical Engineering,  
University of Sydney,  
Sydney, N. S. W., 2006, Australia.
