The purpose of this journal is to report original investigations on the synthesis, structure, and the physical and chemical properties of coordination compounds of metals. It will deal primarily with basic phenomena such as equilibria, kinetics, mechanisms and catalytic effects. Its scope can be defined as involving the interactions of organic and inorganic ligands with metals. Material on applications of coordination compounds may also be included in papers when relevant to the main theme.

Books for review should be sent direct to the Editor, at the address above, and not to the publishers.

## SUBSCRIPTION RATES

*Four issues per volume*

*Current volume block: Volumes 9-10*
