## **PREFACE**

## SPECIAL ISSUE: AZAMACROCYCLIC LIGANDS AND THEIR METAL COMPLEXES

This special issue is devoted to an important area of coordination chemistry – azama-crocyclic ligands and their metal complexes, with many applications in theoretical chemistry, biology, medicine, and industry. Despite the fact that such compounds have been covered in recent reviews, monographs and comprehensive issues on coordination and supramolecular chemistry, we believe that this issue, containing the latest experimental achievements in this field, will be useful for readers.

The guest editors are very grateful to the Editors-in-Chief of the *Journal of Coordination Chemistry* for giving them the opportunity to organize the present issue.

Guest editors Juan Costamagna (Chile) Boris Kharisov (Mexico) Guillermo Ferraudi (USA)
