Announcing a new journal for 1994

Meteorological Applications

Published for the Royal Meteorological Society

Meteorological Applications is an exciting new journal devoted to publishing material describing the different applications of meteorology, with particular emphasis on developments within Europe.

In recent years there has been a lot of activity devoted to developing the quality and range of meteorological services provided to a wide range of customers. This has required meteorologists to become increasingly aware of the needs of the users of the information, and for users to have a greater understanding of the services.

Meteorological Applications aims to encourage this flow of information between providers and users.
