This article is dedicated to Professor Boris Ya. Syropyatov with our best wishes on the occasion of his 70th birthday.

#### Abstract

A new convenient synthon for heterocyclic chemistry, namely $1 H$-pyrazolo[3,4- $b$ ]pyridin-3-ylguanidine was successfully prepared by selective guanylation of $1 H$-pyrazolo[3,4-b]pyridin-3-amine. A series of 3,4dihydropyrido $\left[2^{\prime}, 3^{\prime}: 3,4\right]$ pyrazolo $[1,5-a][1,3,5]$ triazin-2-amines was synthesized from $1 H$-pyrazolo[3,4- $b$ ] pyridin-3-ylguanidine using aldehydes or ketones as one-carbon inserting reagents. The tautomeric preferences of the products were determined using spectroscopic (e.g., 2D NOESY NMR) and single crystal X-ray diffraction data.

J. Heterocyclic Chem., 49, 763 (2012).

## INTRODUCTION

Pyrazolo[1,5-a][1,3,5]triazine ring system has been known since the first report by Checchi and Ridi in 1957 [2] on the synthesis of the compounds with this heterocyclic core. Now, the pyrazolo[1,5-a][1,3,5]triazine nucleus is well recognized as a template for the development of new heterocyclic molecules with potential therapeutic properties [3]. However, information on pyrazolo[1,5-a][1,3,5]triazines fused with other rings, particularly pyridine ring, is limited. The available data concerning synthesis of pyrido[ $\left.2^{\prime}, 3^{\prime}: 3,4\right]$ pyrazolo[1,5-a][1,3,5]triazines are fragmentary and the products lack appropriate structural characterization [4-7].

N -Heterocyles bearing guanidine moiety in the position vicinal to the endocyclic nitrogen atom are useful building blocks for the construction of the fused amino-1,3,5-triazines. The annelation of the triazine ring can be achieved via a cyclocondensation of the heterylguanidines with a variety of one-carbon inserting reagents. In our program on the synthesis of fused 1,3,5-triazines, this strategy has been successfully applied for various 1,2,4-triazol-5-yl- [8-12], benzimidazol-2-yl- [13-18], benzoxazol-2-yl- [18], benzothiazol-2-yl- [18], pyrimidin-2-yl- [19,20], and quinazolin-2-yl- [17,21] substituted guanidines. Among fused 1,3,5-triazines obtained by this approach, dihydro-1,3,5-triazines appeared to be the
more interesting group in terms of their biological activity (viz., antifolate [14,16], antibacterial [13], and anticancer [12,17] properties).

This study is designed with the objective to synthesize a series of 3,4-dihydropyrido[ $\left.2^{\prime}, 3^{\prime}: 3,4\right]$ pyrazolo[1,5-a][1,3,5] triazines via the cyclocondensation of $1 H$-pyrazolo[3,4-b] pyridin-3-guanidine (3) with carbonyl compounds (i.e., aldehydes and ketones). The structural features of the products, particularly tautomeric preferences are also discussed herein.

## RESULTS AND DISCUSSION

$1 H$-Pyrazolo[3,4-b]pyridin-3-amine (2), required for the synthesis of guanidine $\mathbf{3}$, was prepared using previously reported [22] reaction of 2-chloro-3-cyanopyridine (1) with hydrazine (Scheme 1). The guanylation of $\mathbf{3}$ with cyanamide in the presence of acid proceeded at the exocyclic nitrogen affording 1 H -pyrazolo[3,4-b]pyridin-3-ylguanidine (3) as a salt. The ${ }^{1} \mathrm{H}$ NMR spectrum of the hydrochloride of compound 3 contained a broad signal of four protons at 8.05 ppm corresponding to the guanidine group and two deuterium oxide exchangeable singlets at 12.05 and 13.56 ppm ,

Scheme 1. Synthesis of $1 H$-pyrazolo[3,4-b]pyridin-3-ylguanidine (3).

therefore, suggesting protonation of the endocyclic pyridine nitrogen rather than the guanidine group of $\mathbf{3}$. The base 3 is freely soluble in aqueous solutions of strong alkali (e.g., sodium hydroxide) but can be conveniently isolated by treatment of salt $3 \cdot \mathrm{HCl}$ with aqueous sodium carbonate.

In the piperidine-catalyzed reaction with pyrazolo[3,4-b] pyridin-3-ylguanidine (3), aldehydes acted as electrophilic one-carbon inserting reagents providing hitherto unknown 4-het(aryl)-3,4-dihydropyrido[ $\left.2^{\prime}, 3^{\prime}: 3,4\right]$ pyrazolo[1,5-a][1,3,5] triazin-2-amines (5) (Scheme 2 and Table 1). The signals of the $\mathrm{sp}^{3}$-hybridized carbon atom of $\mathbf{5}$ in ${ }^{13} \mathrm{C}$-NMR spectra at $63-70 \mathrm{ppm}$ (Table 2) confirmed that the triazine ring closure had occurred and ruled out structure 4 (probable intermediate in the reaction).

The amino group, methine proton at the $\mathrm{sp}^{3}$-hybridized carbon, and endocyclic NH signals at 6.43-6.61, 6.81-7.15, and $7.87-8.11 \mathrm{ppm}$, respectively (Table 2), appeared in the regions characteristic for the similar fused aryl-substituted dihydro-1,3,5-triazines with the primary amino group [8,1217,21].

The reaction of guanidine $\mathbf{3}$ with acetone under catalysis of piperidine led to the formation of 3,4-dihydropyrido [ $\left.2^{\prime}, 3^{\prime}: 3,4\right]$ pyrazolo[1,5-a][1,3,5]triazin-2-amine (6) with two geminal methyl groups (Scheme 3). Spiro fused analog 7 was prepared similarly by heating 3 with cyclopentanone in ethanol. The signals in ${ }^{13} \mathrm{C}$-NMR spectra at 70.6 and 80.0 ppm (for 6 and 7, respectively) indicated the creation of quaternary $\mathrm{sp}^{3}$-hybridized carbon atoms formed due to the triazine ring annelation.

3,4-Dihydropyrido[ $\left.2^{\prime}, 3^{\prime}: 3,4\right]$ pyrazolo[1,5-a][1,3,5]triazines $\mathbf{5}, \mathbf{6}$, and $\mathbf{7}$ might be involved in the prototropic annular tautomerism. Possible migration of the proton from one to another endocyclic nitrogen atom might result in the existence of four tautomers: 3,4-dihydro- (A), 1,4-dihydro- (B), 4,6-dihydro- (C), and 4,7-dihydro- (D) forms (Scheme 4).

Scheme 2. Synthesis of 4-(het)aryl-3,4-dihydropyrido $\left[2^{\prime}, 3^{\prime}: 3,4\right]$ pyrazolo[1,5-a][1,3,5]triazin-2-amines(5).

The coupling of the $\mathrm{H}-4$ and NH signals ( ${ }^{3} J=0-1.9 \mathrm{~Hz}$ ) in ${ }^{1}$ H NMR spectra of $\mathbf{5}$ suggested the equilibrium to be shifted toward 3,4-dihydro-tautomeric form A. In a 2D NOESY experiment conducted on $\mathbf{6}$, a strong pair of cross-peaks was observed for the gem-dimethyl signal at 1.72 ppm and the NH signal at 7.62 ppm . The close spatial relationship of the methyl groups and the proton at annular nitrogen atom might correspond to the 3,4-dihydro- (A) or 4,6-dihydro- (C) tautomeric forms. X-ray crystallographic study [23] on $\mathbf{6}$ was performed to differentiate between these two tautomers. The crystals suitable for X-ray diffraction analysis were obtained by recrystallization of $\mathbf{6}$ from ethanol. The molecule of 6
crystallized together with one ethanol molecule, therefore providing the ethanol monosolvate of $\mathbf{6}$. Similarly to the previously reported [10,24] fused gem-dimethyl substituted amino-1,3,5-triazines, 6 existed in the crystal as a tautomer with the labile hydrogen atom located at the triazine nitrogen atom adjacent to the quaternary $\mathrm{sp}^{3}$-hybridized carbon atom (Fig. 1). Considering the similarity of the spectral data for 5-7, we concluded that 3,4-dihydro-tautomeric form $\mathbf{A}$ was generally preferred in solution and solid states for all series of the compounds.

Pyrido[ $\left.2^{\prime}, 3^{\prime}: 3,4\right]$ pyrazolo[1,5-a][1,3,5]triazines 5-7 underwent a series of biological screening assays. They showed

Scheme 3. Reaction of 1H-pyrazolo[3,4-b]pyridin-3-ylguanidine (3) with ketones.

neither appreciable antiproliferative activity against MDA-MB-231 breast cancer cell line nor dihydrofolate reductase inhibitory activity. They were also found to be inactive in the ApoE secretion, cell cycle, anti-angiogenesis, insulin secretion, and Wnt pathway Eli Lilly's phenotypic bioassay modules.
In conclusion, a series of new 3,4-dihydropyrido[ $\left.2^{\prime}, 3^{\prime}: 3,4\right]$ pyrazolo $[1,5-a][1,3,5]$ triazines 5 -7 was successfully synthesized using cyclocondensation of $1 H$-pyrazolo[3,4-b]pyridin3 -ylguanidine (3) with carbonyl compounds. The developed method is general, and a variety of aldehydes and ketones can be applied as one-carbon inserting reagents for the triazine ring annelation. The products 5-7 appear to exist as the 3,4-dihydro-tautomers in the solution and solid state.

Scheme 4. Possible tautomeric forms of 3,4-dihydropyrido [2', $\left.3^{\prime}: 3,4\right]$ pyrazolo[1,5-a][1,3,5]triazin-2-amines (annular tautomerism).

## EXPERIMENTAL

Melting points (uncorrected) were determined on a Gallenkamp melting point apparatus. Analytical thin layer chromatography (TLC) was carried out on aluminum plates coated with silica gel 60 F254 (Merck) with detection by UV light. ${ }^{1} \mathrm{H}$ - and ${ }^{13} \mathrm{C}-\mathrm{NMR}$ spectra were recorded on a Bruker DPX-300 spectrometer in the dimethyl sulfoxide- $d_{6}\left(\right.$ DMSO- $\left.d_{6}\right)$ solution using tetramethylsilane (TMS) as an internal reference. Assignments were done on the basis of $2 \mathrm{D}{ }^{1} \mathrm{H}-{ }^{1} \mathrm{H}$ COSY, ${ }^{1} \mathrm{H}-{ }^{13} \mathrm{C}$ HMQC, and NOESY experiments.

1H-Pyrazolo[3,4-b]pyridin-3-amine (2). The mixture of 2-chloro-3-cyanopyridine ( $\mathbf{1}, 6.93 \mathrm{~g}, 50 \mathrm{mmol}$ ) and hydrazine hydrate $(80 \%, 6.2 \mathrm{~mL}, 100 \mathrm{mmol})$ in ethanol ( 60 mL ) was heated under reflux with stirring for 6 h . After cooling at $4^{\circ} \mathrm{C}$, the precipitated product was filtered, washed with cold ethanol, dried and recrystallized from ethanol to give $5.76 \mathrm{~g}(86 \%)$ of 2; mp: 183-184 ${ }^{\circ} \mathrm{C}$ [ref. 22; mp: 184-185 ${ }^{\circ} \mathrm{C}$ ]; ${ }^{1} \mathrm{H}-\mathrm{NMR}$ ( 300 MHz, DMSO- $d_{6}$ ): $\delta 6.33\left(2 \mathrm{H}, \mathrm{br} \mathrm{s}, \mathrm{NH}_{2}\right), 6.96(1 \mathrm{H}, \mathrm{dd}$, $\left.{ }^{3} J=7.9,{ }^{3} J=4.5 \mathrm{~Hz}, \mathrm{H}-5\right), 8.15\left(1 \mathrm{H}, \mathrm{dd},{ }^{3} J=7.9,{ }^{4} J=1.5 \mathrm{~Hz}\right.$, $\mathrm{H}-4), 8.35\left(1 \mathrm{H}, \mathrm{dd},{ }^{3} J=4.5,{ }^{4} J=1.5 \mathrm{~Hz}, \mathrm{H}-6\right), 11.88(1 \mathrm{H}, \mathrm{br} \mathrm{s}$, NH ); ${ }^{13} \mathrm{C}-\mathrm{NMR}$ ( 75 MHz , DMSO- $d_{6}$ ): $\delta 106.1$ (C-3a), 113.7 (C-5), 129.6 (C-4), 148.0 (C-3), 148.4 (C-6), 152.3 (C-7a).
$\mathbf{1 H}$-Pyrazolo[3,4-b]pyridin-3-ylguanidine (3). To the solution of 1 H -pyrazolo[3,4-b]pyridin-3-amine ( $\mathbf{2}, 4.20 \mathrm{~g}, 30 \mathrm{mmol}$ ) and cyanamide ( $1.39 \mathrm{~g}, 30 \mathrm{mmol}$ ) in ethanol ( 25 mL ), concentrated hydrochloric acid ( $3 \mathrm{~mL}, 30 \mathrm{mmol}$ ) was added and the reaction mixture was heated under reflux with stirring for 6 h . After cooling, the precipitated $1 H$-pyrazolo[3,4-b]pyridin-3-ylguanidine hydrochloride was filtered, washed with cold ethanol, and dried. Free base 3 was obtained by treatment of aqueous solution of pyrazolo[3,4-b] pyridin-3-ylguanidine hydrochloride with $10 \%$ sodium carbonate solution ( 30 mL ) with stirring and gentle heating at $40-50^{\circ} \mathrm{C}$ for 10 min . After cooling, the precipitated product $\mathbf{3}(3.8 \mathrm{~g}, 72 \%)$ was filtered, washed with cold water, dried and used in the subsequent reactions without further purification. Analytical sample was

Figure 1. Molecular structure of 4,4-dimethyl-3,4-dihydropyrido [ $\left.2^{\prime}, 3^{\prime}: 3,4\right]$ pyrazolo[1,5-a] [1,3,5]triazin-2-amine (6) as an ethanol monosolvate. Displacement ellipsoids are drawn at the $50 \%$ probability level.
obtained by recrystallization from ethanol; mp: 256-257 ${ }^{\circ} \mathrm{C} ;{ }^{1} \mathrm{H}-$ NMR ( 300 MHz, DMSO- $d_{6}$ ): $\delta 6.55$ ( 4 H , br s, $\mathrm{NHC}(\mathrm{NH}) \mathrm{NH}_{2}$ ), $7.00\left(1 \mathrm{H}, \mathrm{dd},{ }^{3} J=7.5,{ }^{3} J=4.5 \mathrm{~Hz}, \mathrm{H}-5\right), 8.05\left(1 \mathrm{H}, \mathrm{dd},{ }^{3} J=7.5\right.$, $\left.{ }^{4} J=1.1 \mathrm{~Hz}, \mathrm{H}-4\right), 8.39\left(1 \mathrm{H}, \mathrm{dd},{ }^{3} J=4.5,{ }^{4} J=1.1 \mathrm{~Hz}, \mathrm{H}-6\right), 12.38$ $(1 \mathrm{H}, \mathrm{br} \mathrm{s}, \mathrm{NH}) ;{ }^{13} \mathrm{C}-\mathrm{NMR}\left(75 \mathrm{MHz}\right.$, DMSO-d $\left.\mathrm{d}_{6}\right): \delta 110.7(\mathrm{C}-3 \mathrm{a})$, 114.6 (C-5), 129.5 (C-4), 148.6 (C-6), 151.1 (C-3), 151.8 (C-7a), $156.0\left(\mathrm{NHC}(\mathrm{NH}) \mathrm{NH}_{2}\right)$; Anal. Calcd. for $\mathrm{C}_{7} \mathrm{H}_{8} \mathrm{~N}_{6}: \mathrm{C}, 47.72 ; \mathrm{H}$, 4.58; N, 47.70. Found: C, $47.64 ;$ H, $4.60 ;$ N, 47.72 .

General procedure for preparation of 4-(Het)aryl-3,4dihydropyrido $\left[2^{\prime}, 3^{\prime}: 3,4\right]$ pyrazolo $[1,5-a][1,3,5]$ triazin-2-amines
(5). To the solution of $1 H$-pyrazolo[ $3,4-b$ ]pyridin-3-ylguanidine (3, $0.88 \mathrm{~g}, 5 \mathrm{mmol}$ ) and appropriate (het)arylaldehyde ( 5 mmol ) in ethanol ( 15 mL ), piperidine ( $0.30 \mathrm{~mL}, 3 \mathrm{mmol}$ ) was added and the mixture was heated under reflux with stirring for 3-16 h. After cooling, the precipitated product was filtered, washed with cold ethanol, dried and recrystallized from ethanol.
4,4-Dimethyl-3,4-dihydropyrido $\left.{ }^{\prime} \mathbf{2}^{\prime}, \mathbf{3}^{\prime}: 3,4\right]$ pyrazolo[1,5-a] [1,3,5]triazin-2-amine (6). To the solution of 1 H -pyrazolo [3,4-b]pyridin-3-ylguanidine ( $3,0.88 \mathrm{~g}, 5 \mathrm{mmol}$ ) in acetone $(30 \mathrm{~mL})$, piperidine $(0.30 \mathrm{~mL}, 3 \mathrm{mmol})$ was added and the mixture was heated under reflux with stirring for 10 h . After cooling, the precipitated product was filtered, washed with cold acetone, dried and recrystallized from ethanol to give 0.84 g ( $78 \%$ ) of 6; mp: $285-286{ }^{\circ} \mathrm{C} ;{ }^{1} \mathrm{H}$ NMR ( 300 MHz, DMSO- $d_{6}$ ): $\delta$ $1.72\left(6 \mathrm{H}, \mathrm{s}, \mathrm{Me}_{2}\right), 6.28\left(2 \mathrm{H}, \mathrm{s}, \mathrm{NH}_{2}\right), 6.77\left(1 \mathrm{H}, \mathrm{dd},{ }^{3} J=8.3,{ }^{3} J=\right.$ $4.1 \mathrm{~Hz}, \mathrm{H}-9), 7.62(1 \mathrm{H}, \mathrm{s}, \mathrm{NH}), 7.89\left(1 \mathrm{H}, \mathrm{dd},{ }^{3} J=8.3,{ }^{4} J=1.9\right.$ $\mathrm{Hz}, \mathrm{H}-10), 8.42\left(1 \mathrm{H}, \mathrm{dd},{ }^{3} \mathrm{~J}=4.1,{ }^{4} \mathrm{~J}=1.9 \mathrm{~Hz}, \mathrm{H}-8\right) ;{ }^{13} \mathrm{C}-\mathrm{NMR}$ ( 75 MHz, DMSO- $d_{6}$ ): $\delta 28.6\left(\mathrm{Me}_{2}\right), 70.6(\mathrm{C}-4), 103.5(\mathrm{C}-10 \mathrm{a})$, 113.4 (C-9), 129.9 (C-10), 139.8 (C-10b), 150.9 (C-8), 153.4 (C-6a), $157.0(\mathrm{C}-2)$; Anal.
