SUBJECT INDEX TO VOLUME 21

A

- β -Adrenergic agonist ractopamine, development of an immunoassay for, 1–23
- Agglutination, and precipitation, 143–164
- Antibodies
- anti-GM1 ganglioside, latex agglutination assay for detection in patients with neuropathy, 377–386
 - recognition of proteins and peptides by, 85–108
- Antibody affinity, determination of, 211–234
- Antibody receptors, in immunosensors, electroplated conducting polymers as, 51–64
- Antigen–antibody bond, nature of, 109–142
- Anti-GM1 ganglioside antibodies, detection in patients with neuropathy by a latex agglutination assay, 377–386

B

- Blocking agents, comparison for an ELISA for lipopolysaccharide, 341–354

C

- Cell-capture enzyme immunoassay, a Giemsa assay for determination of optimal conditions for immobilization of cells in, 297–314
- CGP 60536, direct micro-radioimmunoassay of, 65–84
- Conducting polymers, electroplated, as antibody receptors in immunosensors, 51–64
- Cortisol, one-step ELISA for direct estimation in the serum, 39–50

D

- Dot-blot immunogold assay, for identification of a proliferative antigen in the initial cells of a wheat stem meristem, 401–410
- Dot-blotting, methods and applications, 273–296

E

- Electroelution, of individual protein bands from SDS polyacrylamide gels for direct study in cellular assays, 355–375

- Electroplated conducting polymers,
as antibody receptors in
immunosensors, 51–64
- ELISA. *See* Enzyme-linked immuno-
sorbent assay
- ELISPOT. *See* Enzyme-linked
immunospot
- Enzyme immunoassay, cell capture, a
simple Giemsa assay for deter-
mination of optimal conditions
for the immobilization of cells
in, 297–314
- Enzyme immunomicroscopy,
235–253
- Enzyme-linked immunosorbent assay
(ELISA), 165–209
for lipopolysaccharide, comparison
of blocking agents for,
341–354
one step, for direct estimation of
serum cortisol, 39–50
peptide-based sandwich, for
human tissue prokallikrein,
411–426
sandwich, for osteoclast differ-
entiation factor in human
osteosarcoma cell line,
327–340
- Enzyme-linked immunospot
(ELISPOT) assay
for detection of interleukin-
12-secreting cells in normal
mice, 25–37
methods and applications,
273–296

F

- Flow cytometry, multiparameter,
255–272

G

- Giemsa assay, for determination of opti-
mal conditions for the immobil-
ization of cells in a cell-capture
enzyme immunoassay, 297–314

I

- Immunoblotting, methods and appli-
cations, 273–296
- Immunofluorescence methods,
235–253
- Immunogold assay, dot-blot, for
identification of a proliferative
antigen in the initial cells of a
wheat stem meristem, 401–410
- Immunosensors, electroplated con-
ducting polymers as antibody
receptors in, 51–64
- Inflammatory activity, as an indicator
of water quality, 387–399
- Interleukin-12-secreting cells, detection
with ELISPOT assay, 25–37

K

- Kallikrein, mature, development of a
peptide-based sandwich ELISA
for tissue prokallikrein without
cross-reactivity to, 411–426

L

- Latex agglutination
for detection of anti-GM1 ganglio-
side antibodies in patients with
neuropathy, 377–386
ultrasound enhanced, for rotavirus
detection, 315–325
See also Agglutination

Ligand-receptor bonds, nature of,
109-142

Lipopolysaccharide, comparison of
blocking agents for an ELISA
for, 341-354

M

Micro-radioimmunoassay, direct, of
the renin inhibitor CGP 60536,
65-84

Multiparameter flow cytometry,
255-272

O

Osteoclast differentiation factor, in
human osteosarcoma cell line,
327-340

P

Peptides, antibody recognition of,
85-108

Precipitation, and agglutination,
143-164

Prokallikrein, human, development of
a peptide-based sandwich
ELISA for, 411-426

Proliferative antigen, in the initial
cells of a wheat stem meristem,
a dot-blot immunogold assay
for identification of, 401-410

Protein bands, electroelution from
SDS polyacrylamide gels for
direct study in cellular assays,
355-375

Proteins, antibody recognition of,
85-108

R

Ractopamine, development of an
immunoassay for, 1-23

Renin inhibitor CGP 60536, direct
micro-radioimmunoassay of,
65-84

Rotavirus, detection using ultrasound-
enhanced latex agglutination and
turbidimetry, 315-325

S

SDS polyacrylamide gels, electro-
elution of individual protein
bands for direct study in
cellular assays, 355-375

Stem meristem, wheat, a dot-blot im-
munogold assay for identifi-
cation of a proliferative antigen
in the initial cells of, 401-410

T

Turbidimetry, for rotavirus detection,
315-325

U

Ultrasound-enhanced latex agglutina-
tion, for rotavirus detection,
315-325

W

Water quality, inflammatory activity
as an indicator of, 387-399

Whole blood culture, human, to
monitor inflammatory activity
as an indicator of water quality,
387-399
