

## Keyword index to Volume 26

- $\alpha$ -chlorohydrin, 259  
 $\alpha$ -chloroketone, 259  
 $\alpha$ -pinene, 127
- $\beta$ -carotene, 327  
 $\beta$ -D-xylosidase, 156  
 $\beta$ -xylosidase, 276
- L-Carnitine, 309
- $\gamma$ -Butyrobetaine, 309
- $\mu$ , 290
- $\nu$ , 290
- $^1\text{H}$  NMR, 2  
 $^{13}\text{C}$  NMR spectroscopy, 70  
 $^{13}\text{C}$  NMR, 15  
 $^{13}\text{C}$ -labelled 2,4-D, 70  
 $^{19}\text{F}$  NMR, 22  
 $^{19}\text{F}$  NMR, 35  
16S rRNA, 210
- ABE, 290  
acetic acid, 121, 171  
acetophenone, 35  
*Achromobacter cycloclast*, 309  
*Acinetobacter* sp., 333  
actinomycete, 241  
adaptation, 145  
ageing, 90  
*Alcaligenes eutrophus*, 121  
alginate, 62  
alkalophilic *Bacillus*, 387  
amino acids, 235  
amylopectin, 90  
anka, 280  
anka pigments, 280  
anthracene, 369  
antibody-conjugated alkaline phosphatase, 345  
antifungal, 216  
*Aspergilli*, 230  
*Aspergillus niger*, 161  
*Aspergillus phoenicis*, 156  
*Aureobasidium*, 276  
autolysis, 235
- Bacillus*, 107  
*Bacillus subtilis* (natto), 115  
bacteria, 196  
bacterial adhesion, 303  
bacterial and fungal adhesion, 178  
bacterial detection, 345  
bacterial detection method, 345  
bacterial physiology, 203  
Bacteriocin, 191  
Baeyer–Villiger oxidation, 35  
binary biofilms, 178  
biocontrol, 226  
biodegradable thermoplastics, 121  
biodegradation, 22, 127, 196, 203, 316  
biodeterioration, 107
- biofilm, 62  
biofilms, 43  
biofilter, 196  
biofiltration, 127  
bioleaching gold, 134  
biological controlaterals, 151  
biomass production, 241  
bioreactor, 316  
bioreactors, 43  
bioremediation, 333  
biotransformation, 140  
BTEX, 316  
butanol, 290
- C. beijerinckii* BA101, 290  
carotenoids, 327  
chemical and enzymatic catalysis, 70  
chromium accumulation, 210  
*Chromobacterium violaceum*, 134  
crude oil, 356  
*Cryptosporidium*, 95  
crystallinity, 90  
curd, 263  
cyanogenesis, 134  
cytochrome P450, 2
- degradation, 2  
deuterolysin, 253  
diffusion, 43  
diffusion map, 53  
dispersive flow, 43  
dromedary milk, 263  
DSC, 90
- electrolytes, 62  
enhanced biological phosphate removal, 333  
enzyme treatment, 383  
enzyme yield, 263  
erythritol, 248  
*Escherichia coli*, 341  
estuarine sediments, 77  
ethanol, 145  
ethyl carbamate determination, 363  
*Eutypa* dieback, 151  
*Eutypa lata*, benomyl, 151  
exopectinase
- fed-batch culture, 248  
fermentation, 145, 216  
flavoprotein monooxygenase, 35  
fluoranthene, 283, 369  
fluorocatechols, 22  
fluoromaleylacetates, 22  
fluoromuconates, 22  
fluoromuconolactones, 22  
fluorophenols, 22  
fluoroquinolones, 140  
food safety, 222  
Fourier transform midinfrared spectroscopy, 185  
Fourier transform Raman spectroscopy, 185  
fungus growth, 280
- Fusarium lateritium*, 151  
*Fusarium oxysporum*, 178
- geosmin, 241  
*Geotrichum klebahnii*, 260  
*Glarea lozoyensis*, 216  
glucose concentration, 248  
glucose, 296, 341  
grapevine, 151
- hardwood spent sulfite liquor, 145  
Hazard Analysis Critical Control Points (HACCP), 222  
heavy metals, 333  
horseradish peroxidase, 70  
host specificity, 95  
humic substances, 70  
hydrogen bonds, 303  
hydroxyproline, 216
- immunomagnetic capture, 345  
*in vivo*  $^{13}\text{C}$  NMR, 9  
isolates, 95
- koji, 230, 253
- labeling, 62  
lactic acid, 171  
lactic fermentation, 263  
localized diffusion coefficient, 53
- magnetic resonance microscopy, 43  
membrane bioreactors, 203  
membrane, 53  
menaquinone, 115  
metal resistance, 210  
metalloprotease, 253  
methanol, 127  
methanol conversion, 9  
methanotrophs, 9  
methylcyclohexane, 356  
microbial reduction, 259  
Microcin B17, 341  
microcosms, 222  
micronutrients, 241  
microstructure, 263  
migration rates, 77  
mixed-bacterial culture, 356  
molecular dynamics, 62  
molybdate, 350  
*Monascus purpureus*, 280  
morpholine, 2  
*Mucor ramannianus*, 140  
multivariate analysis, 185  
municipal solid waste, 83  
mutants, 369  
*Mycobacterium*, 2
- NaCl saturation, 363  
naphthalene, 369  
nisin, 107  
nitrite, 350  
NMR, 62  
NMR imaging, 77  
NMR micro-imaging, 53
- NMR microscopy, 53  
nonribosomal peptide synthetase, 216
- obligate methanotroph, 15  
off-flavor, 241  
oil, 77  
oil reservoir, 350  
oxygen, 341
- p*-nitrophenyl- $\beta$ -D-xyloside, 276  
PAH degradation, 283  
paper mill, 107  
partial least-squares regression, 185  
PCR–DGGE, 203  
pectin, 260  
pectin solubilizing enzymes, 260  
*Pediococcus*, 191  
peptides, 235  
pH, 363  
PHB, 121  
PHB, 15  
phenanthrene, 283, 369  
phenyl acetate, 35  
physical factors, 191  
phytase, 161  
phytic acid, 248  
phytopathogenic moulds, 226  
*Pichia stipitis*, 145  
plasticisers, 90  
pneumocandin, 216  
polycyclic aromatic hydrocarbons, 283  
polygalacturonases, 260  
polyhydroxybutyrate, 121  
polyphosphate, 333  
polyurethane, 263  
porous media, 43  
pretreatment, 83  
principal component analysis, 83  
principal component regression, 185  
production, 309  
production rate, 248  
properties, 387  
protease, 230, 383  
protease A, 235  
protopectinases, 260  
*Pseudomonas fluorescens*, 35
- quantification, 222
- radio-frequency field gradients, 53  
*Ralstonia eutropha*, 121  
respiration test, 83  
response surface methodology, 161  
reverse sample genome probing, 350  
rheology, 263  
*Rhodotorula glutinis*, 327  
rhodotorulic acid, 226  
rice wine, 363  
Robbins device, 178

- 396
- Saccharomyces cerevisiae*, 145, 171, 235
  - Salmonella*, 222
  - salt tolerance, 230
  - salt tolerant, 253
  - sarafloxacin, 140
  - SDSM, 290
  - serine protease, 387
  - sewage sludge, 383
  - silicone membrane, 316
  - sludge, 43
  - sludge settling, 383
  - sodium chloride, 290
  - soils, 43
  - solid phase microextraction, 356
  - solids reduction, 383
  - solid state NMR, 90
  - solid-state <sup>13</sup>C NMR spectroscopy, 83
  - solid-state fermentation, 161, 263, 280
  - solid-state NMR, 62
  - souring, 350
  - species, 95
  - specific growth rate, 171
  - Sphingomonas*, 283, 369
  - starch, 107
  - statistical modeling, 161
  - Stenotrophomonas maltophilia*, 178
  - stereospecific reduction, 259
  - storage, 363
  - Streptomyces*, 210
  - Streptomyces halstedii*, 241
  - Styrene, 196
  - submerged and solid-state fermentation, 296
  - substrate specificity, 387
  - subsurface bacteria, 283
  - sugar cane molasses, 327
  - sulfate-reducing bacteria, 350
  - surface oxides, 303
  - synergy, 171
  - systematics, 95
  - tannase, 296
  - tannic acid, 296
  - taxonomy, 95
  - Tay Estuary, 77
  - thermophilic, 127, 203
  - thermostability, 156
  - thermotolerant, 107
  - TiO<sub>2</sub>, 303
  - Torula* sp., 248
  - torularhodin, 327
  - toluene, 327
  - transport processes, 43
  - tri-calcium phosphate, 290
  - urea, 363
  - vapor-phase, 316
  - vitamin K<sub>2</sub>, 115
  - VOCs, 127
  - volatile hydrocarbons, 356
  - water activity, 222
  - xenobiotics, 2
  - xylanase, 156
  - yeasts, 226
