

## Keyword index to Volume 29

- $\alpha$ -amylase, 111
- L-ascorbic acid, 93
- 4-hydroxybenzoic acid, 129
- A. vinelandii*, 209
- ACE inhibitor, 292
- Acetobacter xylinum*, 189
- acetone–butanol–ethanol, 117
- Acinetobacter*, 233
- Acremonium* spp., 20
- actinomycete ecology, 60
- actinomycin D, 299
- acyl-homoserine lactone, 339
- adherence, 373
- aeration control, 309
- agricultural waste, 117
- air conditioners, 373
- alginate, 209
- alternan, 177
- amino acids, 314
- amylase hyperproducing, 70
- anaerobic, 268
- Anatolia, 28
- aniline blue, 200
- antagonistic activity, 303
- antibacterial activity, 296
- antibiotic, 296
- antibiotic resistance, 60
- antifoam, 149
- antifungals, 38
- antimould screening, 368
- arabinose, 34
- arabinose transport, 34
- artisanal goats' cheese, 303
- Aspergillus niger*, 6, 259
- autolysis, 134
- automobiles, 373
- Azotobacter vinelandii*, 129
- bacterial cellulose, 189
- bacterial consortia, 20
- bacterial exopolysaccharides, 204
- BactiFluor, 323
- batch cultivation, 111
- bioaugmentation, 20
- biocide, 10, 354
- biocides, 238
- bioconversion, 177
- biodegradation, 286
- biofilm, 10, 339, 347, 354, 361
- biofuel, 124
- biological indicator, 51
- bioluminescence, 233
- biomass, 185
- biomass recycle reactor, 286
- bioreporter, 233
- biosorption, 163
- branched glucooligosaccharides, 196
- Candida tropicalis*, 16
- CaO, 296
- carbon dioxide, 275
- catabolite repression, 70, 221
- Cel*<sup>+</sup>, 189
- Celite, 259
- cell–cell signaling, 339
- cell immobilization, 259
- Cellulomonas*, 200
- central composite design, 281
- chemostat, 155
- Chinese cotton, 51
- Chlorella*, 93
- Chlorella vulgaris*, 275
- Chlorophyceae, 93
- Cladosporium*, 163
- Clavibacter michiganensis*, 20
- Clostridium beijerinckii* BA101, 117
- colonization, 6
- competition, 155
- conductimetric assay, 296
- constitutive promoter, 34
- continuous process, 140
- Corioliopsis gallica*, 214
- corn cob, 124
- cryptic growth, 75
- curdlan, 200
- cv. Emir, 28
- cysts, 129
- D* value, 51
- defoamer, 149
- defoamer modeling, 149
- differential expression, 145
- emissions, 99
- Escherichia coli*, 34, 155, 221, 303
- Escherichia coli* KO11, 124
- ethanol, 124, 140
- evolution, 60
- exopolysaccharide, 200
- exopolysaccharides, 170, 181
- exopolysaccharide production, 129
- FAD-binding site, 1
- feather, 255
- fed-batch fermentation, 16, 181
- fermentation, 28, 93, 117, 140
- Flammulina velutipes*, 292
- Flavobacterium*, 255
- flavor compounds, 28
- flow cells, 331
- fluorescence, 323
- formation foam control, 149
- fungal adhesion, 6
- fungal growth, 38
- fungal invasion, 6
- fungal species, 331
- Fusarium subglutinans*, 368
- Fusarium*, 264
- galacto-oligosaccharides, 281
- gellan, 185
- gellan genes, 170
- gellan gum, 170
- gellan pathway, 170
- gene cloning, 1
- glucan, 200
- glucoamylase, 111, 259
- glutaraldehyde, 354
- greenhouse gas, 275
- growth kinetics, 286
- gum arabic, 177
- halometabolite, 1
- heat shock, 140
- hemicellulose, 124
- heterologous expression, 55
- heterotroph, 83
- hydrodynamics, 347, 361
- hydrophilic contact lenses, 6
- hydrothermal vents, 204
- industry, 238
- inhibition, 228
- irradiation, 264
- isothiazolone biocide, 331
- keratin, 255
- laccase, 55
- lactic acid bacteria, 303
- lactic acid bacterium, 44
- lactic acid production, 221
- Lactobacillus paracasei* subsp. *paracasei*, 303
- lactose concentration, 281
- Leuconostoc*, 196
- Leuconostoc mesenteroides*, 44
- levofloxacin resistance, 155
- Listeria monocytogenes*, 228
- lux*, 233
- mannitol, 44
- membrane cell-recycle bioreactor, 44
- membrane procedure, 368
- metals, 268
- metal working fluids, 20, 323
- methanogenic, 268
- methanol, 268
- Methylobacterium mesophilicum*, 20
- MgO, 296
- microgravity, 299
- minimum selection concentration, 155
- mixed chemical effluent, 20
- mixed cultures, 264
- modification, 177
- molecular weight, 209
- mopR*, 233
- multiple species biofilms, 331
- mushroom compost, 99
- mutagenesis, 70
- mutant, 185
- mutants, 209
- nickel, 268
- nisin, 228
- nitrate, 83, 243
- nitrate-reducing bacteria, 83, 243
- nitrification, 309
- nitrite, 354
- nitrogen compounds, 134
- nitrogen fixation, 75
- nitrogen sources, 99
- nitrous oxide, 309
- odor, 99
- oil field microbiology, 347
- oligotroph, 75
- optimization, 281
- optimization, 292
- organochlorine pesticide, 163
- oxidation, 214
- packing peanuts, 117
- PCMX, 238
- PCR, 1
- PEG-laccase, 214
- penetration, 10
- Penicillium*, 177
- Penicillium griseoroseum*, 145
- peptides, 134, 314
- petroleum, 83, 243
- phenol, 233
- phosphotransferase, 60
- photobioreactor, 275
- Pichia pastoris*, 55
- poly- $\beta$ -hydroxybutyrate, 129
- polycyclic aromatic hydrocarbons, 214
- polygalacturonase, 145
- polysaccharide, 185
- polysaccharide engineering, 170
- p,p'*-DDT, 163
- prebiotic, 196, 281
- pressure-treatment formulations, 368
- probiotic, 196
- probiotic strains, 281
- process control, 309
- protease, 255
- proteases, 259
- proteins, 314
- Prototheca*, 93
- Pseudomonas aeruginosa*, 10, 339
- Pyronema domesticum*, 51
- quorum sensing, 339
- radiation, 51
- reaction–diffusion equation, 339
- recombinant yeast, 111
- regulatable control, 34
- resistance, 10, 238
- response surface methodology, 44
- resting cells, 44
- Rhodococcus erythropolis*, 20
- Robbins Device, 331
- rotating disc fermentor, 189
- Saccharomyces*, 140, 264
- Saccharomyces cerevisiae*, 28
- SCP, 264
- screening, 60
- second fermentation, 314
- selection, 155
- Serratia marcescens*, 373
- shear stress, 361

- 378  
southern pine (*Pinus palustris*),  
368  
space flight, 299  
sparkling wine, 314  
sphingans, 170  
*Sphingomonas paucimobilis*, 170  
starch, 117  
starvation, 286  
stationary culture, 189  
sterilization, 51  
straw, 99  
strength, 347, 361  
*Streptomyces plicatus*, 299  
structured modeling, 111  
submerged fermentation, 292  
substrate utilization, 75  
sulfate, 83, 243  
sulfate-reducing bacteria, 83,  
243, 354  
sulfide, 83, 243  
sulphate-reducing bacteria, 347  
sweet potatoes, 264  
*Thermomyces lanuginosus*, 70  
thermotolerance, 140  
tolerance, 238  
*Tremella*, 181  
triclosan, 238  
UASB reactor, 268  
ventilation, 38  
viscoelasticity, 347  
viscosity, 185  
vitamin C, 93  
weightlessness, 299  
white rot fungi, 214  
wine, 134  
winemaking, 28  
xylitol, 16  
xylose, 16  
xylose fermentation, 221  
yeast, 134, 314  
Young's modulus, 189  
ZnO, 296
