BOOK REVIEW

"Liquid Chromatography in Clinical Analysis,"
P. M. Kabra and L. J. Marton, editors,
The Humana Press, Clifton, NJ, 1981,
466 pp., \$55.00 (US)

Interest in the application of LC to clinical analysis has intensified during the past two to three years. There is a definite need for an introductory monograph on this subject, and Kabra and Marton have brought together an impressive group of experts to write it.

Included, are chapters dealing with a basic introduction to HPLC, therapeutic drug monitoring and toxicology, and analysis of endogenous human biochemicals. There is a particularly good chapter on electrochemical detection of tyrosine and tryptophan and their metabolites.

Emphasis is on methodology throughout the book, with many practical examples given. This book is recommended for those who are directly involved in clinical analysis and for scientists involved in biochemical research.
