FOREWORD

The first special issue of the Journal of Liquid Chromatography devoted to Size Exclusion Chromatography appeared in 1984. Preparing this second issue, we again invited the experts whose contributions demonstrate the recent progressive trends in development and application of Size Exclusion Chromatography. The greatest attention is paid to the study of various calibrations of the separation systems, to the application of SEC in the investigation of branching and other structural changes of synthetic polymers, to the characterization of biopolymers, and to SEC application in oligomer and low molecular weight substances analysis. All these original contributions represent the latest advances in SEC.
