

Forthcoming Conference

The 7th International Symposium on the Reactivity of Solids will be held at the University of Bristol, from 17—21 July, 1972. Symposia on this series have been held every four years since 1948; the 7th will be the first to be held in Britain. Professor J. S. Anderson, FRS, of Oxford is President, Dr F. S. Stone of Bristol is Chairman, and Dr R. M. Dell of Harwell is Secretary of the organising committee.

The Symposia have always been interdisciplinary in nature, and are of interest not only to chemists but also to chemical engineers, solid state physicists, metallurgists, ceramists and materials scientists. The 7th Symposium will place emphasis upon modern theoretical concepts of solid state reactors, the applications of new experimental techniques and the importance of solid state reactions in technology.
