

## ERRATUM

Volume **82**, Number 1 (1989), in the article "The Structure of  $\text{SmFe}(\text{CN})_6 \cdot 4\text{H}_2\text{O}$  and the Problem of Pseudo-hexagonal Symmetry," by W. Petter, V. Gramlich, and F. Hulliger, pages 161–167: Unfortunately, through a typographical error at the proof stage several values in Tables I and II appear incorrectly. The correct values for the Sm site parameters should be:

Table 1 (page 163)     $x_m = 0.32355(6)$ ,  $z_m = 0.67655(6)$

$X = 0.50005(6)$ ,  $Y = -0.17650(6)$

Table 2 (page 164)     $y = 0.32355(6)$ .
