

(Contents continued from outside cover)

JAISHI, B. and REN, W.-X., Damage detection by finite element model updating using modal flexibility residual	369
YOSHIMURA, M., WU, Q., TAKAHASHI, K., NAKAMURA, S. and FURUKAWA, K., Vibration analysis of the Second Saikai Bridge—a concrete filled tubular (CFT) arch bridge	388
WANG, S.-M., LU, Q.-S., WANG, Q. and XU, P., Reducing the amplitude of vibration at resonances by phase modulation	410
CHA, P.D. and REN, G., Inverse problem of imposing nodes to suppress vibration for a structure subjected to multiple harmonic excitations	425
CHANDIRAMANI, N.K. and POTHALA, T., Dynamics of 2-dof regenerative chatter during turning	448
SHUFRIN, I. and EISENBERGER, M., Vibration of shear deformable plates with variable thickness—first-order and higher-order analyses	465
JEONG, W., LEE, S. and JOSEPH, P., A wall-mounted source array for the excitation of incoherent broadband sound fields with prescribed modal distributions in ducts	490
WANG, J.K. and KHONSARI, M.M., A new derivation for journal bearing stiffness and damping coefficients in polar coordinates	500
WANG, C.Q., ONG, E.H., QIAN, H. and GUO, N.Q., On the application of B-spline approximation in structural intensity measurement	508
SURYAM, B.C.B.N., MEHER, K.K., SINHA, J.K. and RAMA RAO, A., Coherence measurement for early contact detection between two components	519
WANG, C.Y., Fundamental frequencies of annular plates with movable edges	524
BAPAT, C.N., An approximate approach to study the free vibration of a string with an arbitrary variation in mass density and tension, with attached concentrated masses, and its application to hanging chain and rotating cord	529
FARASSAT, F. and MYERS, M.K., Further comments on the paper by Zinoviev and Bies, “On acoustic radiation by a rigid object in a fluid flow”	538
ZINOVIEV, A. and BIES, D.A., Authors’ Reply	548
