## Corrigendum

# Corrigendum to “Bifurcations and chaos in a forced cantilever system with impacts” [Journal of Sound and Vibration 296 (2006) 1068–1078]

Wang Lin\*, Ni Qiao

Department of Mechanics, Huazhong University of Science and Technology, Wuhan 430074, People's Republic of China

Available online 26 December 2006

The authors regret that there were errors in the following equations and apologise for any confusion caused. The corrected versions of Eqs. (2), (3), (5)–(7) and (9) follow.

$$M\ddot{x} + c\dot{x} + 12\frac{EI}{L^3}x + \frac{432}{35}\frac{EI}{L^5}x^3 = F_0\cos(\omega t), \quad (2)$$

$$M\ddot{x} + c\dot{x} + 12\frac{EI}{L^3}x + \frac{432}{35}\frac{EI}{L^5}x^3 + KH(x)(x - e_0) = F_0\cos(\omega t), \quad (3)$$

$$\begin{cases} \dot{y} = z, \\ z = \beta\cos(\Omega\tau) - 2\xi z - y - \frac{36}{35}y^3 - kH(y)(y - \hat{e}_0), \end{cases} \quad (5)$$

$$y = \frac{x}{L}, \quad \tau = \omega_0 t, \quad \xi = \frac{c}{2\omega_0 M}, \quad \beta = \frac{F_0}{\omega_0^2 ML}, \quad \Omega = \frac{\omega}{\omega_0}, \quad k = \frac{KL^3}{12EI}, \quad \hat{e}_0 = \frac{e_0}{L}, \quad \omega_0 = \sqrt{\frac{12EI}{ML^3}}, \quad (6)$$

$$M\ddot{x} + c\dot{x} + 12\frac{EI}{L^3}x + \frac{432}{35}\frac{EI}{L^5}x + G(x) = F_0\cos(\omega t), \quad (7)$$

$$\begin{cases} \dot{y} = z, \\ z = \beta\cos(\Omega\tau) - 2\xi z - y - \frac{36}{35}y^3 - g(y). \end{cases} \quad (9)$$
