Journal of Statistical Physics, Vol. 12, No. 3, 1975

FIELDS OF INTEREST OF BOARD OF EDITORS

Dr. Berni J. Alder
Statistical mechanics, classical equilibrium and transport theory, molecular dynamics, machine computation

Dr. Igor T. Aleksanyan
Physical theory of reliability, thin film physics, physics of surfaces of the solid state

Professor Thor Bak
Statistical mechanics, chemical kinetics, transport, collective methods

Professor A. V. Balakrishnan
Control and information theory

Professor A. Bellemans
Equilibrium statistical mechanics

Professor Frank Buff
Statistical mechanics, surface phenomena, chemical kinetics

Dr. E. Richard Cohen
Numerical analysis, kinetic theory, stochastics, plasmas, reactor physics

Professor Morrel H. Cohen
Application of stochastics to pattern recognition, information and communication theory, life processes, macroeconomics, many-body physics

Professor John S. Dahler
Statistical mechanics, quantum and classical mechanics, kinetic theory

Professor Harry L. Frisch
Theory of liquids, high polymers, foundations of kinetic theory of gases

Dr. Robert P. Futrelle
Nonequilibrium phenomena, fluctuations, electromagnetic problems, theoretical and developmental biology

Professor Julian H. Gibbs
Applications of statistical physics to molecular biology, nature of the glass transition in supercooled liquids and polymers, properties of water in aqueous solutions of biochemical significance, structure and function of biological membranes

Professor Harold Grad
Statistical mechanics, kinetic theory, foundations, mathematical methods, plasma physics

Professor Melville S. Green
Statistical mechanics of irreversible processes, theory of simple liquids, graph theory, theory of critical phenomena, fluctuation theory, ergodic theory

Dr. John M. Hammersley
Monte Carlo methods, stochastic processes

Professor Michael D. Intriligator
Mathematical optimization, economic theory, econometrics

Professor Leo P. Kadanoff
Classical and quantum statistics, fluctuations, transport, urban problems

Professor Thomas Kailath
Statistical communication, control and data processing

Professor Rudolf E. Kalman
Control theory, mathematical system theory, probability

Professor Taro Kihara
Chemical physics related to intermolecular forces in gases, liquids, and solids; astrophysics, cosmology, and general theory of

relativity; transport phenomena in high-temperature plasmas

Professor Tjalling C. Koopmans
Economic theory, optimal growth theory, econometrics

Professor Ryogo Kubo
Classical and quantum statistics, irreversibility, fluctuation and correlation collective methods

Professor Joel L. Lebowitz
Statistical mechanics of equilibrium and nonequilibrium processes, biomathematics, biophysics

Professor Shneior Lifson
Statistical biophysics, linear chain biopolymers

Professor Daniel L. McFadden
Econometrics and communication theory

Professor William C. Meecham
Fluid dynamics, stochastics, random processes in general

Professor Elliott W. Montroll
Statistical mechanics, theory of fluids, stochastics

Professor Dr. A. Münster
General equilibrium statistical mechanics (except ergodic theory and relativity), theory of fluctuations, theory of liquids and liquid mixtures, critical phenomena

Dr. Howard Reiss, Editor-in-Chief
Statistical thermodynamics, nucleation, polymers, life processes, chemical kinetics

Dr. Robert J. Rubin
Brownian motion theory, random walk theory, statistical mechanics of one- and two-dimensional systems, cooperative phenomena and phase transitions, properties of random media, statistical mechanics of many-body systems (nondiagrammatic), statistical mechanics of polymer systems

Professor Kurt E. Shuler
Stochastics, chemical kinetics, relaxation processes

Professor Arnold J. F. Siegert
Equilibrium statistical mechanics (applications of methods of theory of random variables and random functions to problems in equilibrium statistical mechanics), random processes (Brownian motion, circuit noise, with emphasis on applied mathematics aspect not on physical sources of noise)

Dr. Jerome Spanier
Monte Carlo methods, numerical analysis, transport theory

Dr. Frank H. Stillinger, Jr.
Classical and quantum statistics

Dr. Georgio Szegö
Abstract theory of dynamical systems, theory of stability, numerical analysis

Dr. Dirk ter Haar
Classical and quantum statistics, kinetic theory, foundations, statistical physics in astrophysics

Dr. Myron Tribus
Any aspect of inference involving the principle of maximum entropy, applications of Bayesian inference

Professor A. V. Voronel
Phase transitions, properties of liquids, properties of magnetic materials

Professor Lotfi Zadeh
System and computer sciences
