Future Contributions to
Journal of Statistical Physics

This special issue contains papers dedicated to the memory of Professor Ilya Mikhailovich Lifshitz.

ARTICLES

On the Theory of Liquid-Crystalline Ordering of Polymer Chains with
          Limited Flexibility
     A. R. Khoklov and A. N. Semenov
Crystal Shape near the Faceting Phase Transition Point
     A. F. Andreev and I. A. Grishchyuk
On the Interface at the Equilibrium Crystallization
     L. A. Bol'shov, V. L. Pokrovsky, and G. V. Uimin
Domain Growth of First-Order Phase Transitions: An Exactly Solvable
          Model
     Kyozi Kawasaki and Paolo Tombesi
The Relation between the Velocity and Mass Distributions. The Role of
          Collisionless Relaxation Processes
     L. I. Vinokurov, A. V. Kats, and V. M. Kontorovich
The Theory of Ostwald Ripening
     P. W. Voorhees
On Galvanomagnetic Size Effects in Metals
     V. G. Peschanskii
Effect of Impurity Scattering of a Tunnelling Electron on Variable Range
          Hopping Conduction
     B. I. Shklovskii and B. Z. Spivak
Effective Interactions in Dilute Mixtures of ^{3}He in ^{4}He
     Wei-chan Hsu and David Pines
Spontaneous Symmetry Breaking of Optimum Fluctuations in Semi-
          conductors
     F. V. Kusmartsev and E. I. Rashba
Einstein Relation for Quantum Systems
     M. I. Kaganov and V. B. Fiks
Quantum-Field Methods in the Theory of Diffusion-Controlled Reactions
     A. S. Mikhailov and V. V. Yashin
Self-Consistent Diffusive Kinetics and Dissipative Structures in a Distributed
          Cell System
     A. M. Kosevich and I. L. Kruglikov
"Statistical" Symmetry with Applications to Phase Transitions
     Joseph L. Birman and H.-R. Trebin
Methods of Nonlinear Dynamics and Equilibrium Structures of
          Magnetoelastic Chains
     P. I. Belobrov, A. G. Tret'yakov, and G. M. Zaslavsky
The Quantum Ground State of a Heisenberg Ferromagnet with an "Easy-
          Plane" Type of Anisotropy
     A. A. Zvyagin and V. M. Tsukernik
Phase Diagram of Cu-Au-Type Alloys
     Joel L. Lebowitz, Mohan K. Phani, and Daniel F. Styer
