

Advanced Research Workshop on Lattice Gas Automata Theory, Implementation, and Simulation

Sponsored by NATO and DRET

Observatoire de Nice, June 25-28, 1991

- Fluctuation correlations in lattice gas automata
J. P. Boon
- Equilibrium state of a LGCA violating detailed balance
M. H. Ernst
- Lattice gas simulations on the Connection Machine
M. Hénon
- Spontaneous symmetry breaking in a 3-D flow past a cylinder
J. P. Rivet
- Single- and two-phase flow simulations with the Connection Machine
G. D. Doolen
- Lattice gas models of complex fluids
D. H. Rothman
- Lattice-Boltzmann modeling of 3-D immiscible fluids
A. K. Gunstensen
- Lattice Boltzmann equation on non-uniform grids
S. Succi
- Zero-viscosity limit in the lattice Boltzmann equation
M. Vergassola
- Convergence of lattice Boltzmann methods
C. D. Levermore
- Lattice Boltzmann simulation of flow behind a back-facing step
D. d'Humieres
- Lattice gas automata for coupled reaction-diffusion equations
D. Dab
- Renormalization effects in lattice gas automata
R. Benzi

Renormalization diffusion in a lattice gas

B. Boghosian

Micro models of macro behavior: some rigorous results

J. L. Lebowitz

Particle models for spinodal decomposition

E. Presutti

Microphysical methods for interfacial flow simulation

S. Zaleski

Global invariants and stationary distributions in lattice gases

D. Bernardin

Lattice Boltzmann computation on dispersed systems

P. C. Rem

Levy walks in lattice gas hydrodynamics

F. Hayot

Stochastic lattice gases and Burgers' equation

L. Brieger

Lattice gas simulation of osmotic pressure

E. G. Flekkoy

Length selection in a cooling granular gas

G. Zanetti

The phononic lattice solid

P. Mora
