

## **Future Contributions to *Journal of Statistical Physics***

### *ARTICLES*

Preface

*Ph. Choquard, M. Cibils, D. Szász, and A. Krámlí*

Program

Billiards in Polygons: Survey of Recent Results

*Eugene Gutkin*

Asymptotic Dynamics of the Dual Billiard Transformation

*Serge Tabachnikov*

Integrability and Pseudointegrability in Billiards Illustrated by the Harmonic Wedge

*T. Dagaëff*

Numerical Exploration of a Family of Strictly Convex Billiards with Boundary of Class  $\mathcal{C}^2$

*Avram Hayli*

Integrability and Ergodicity of Classical Billiards in a Magnetic Field

*N. Berglund and H. Kunz*

Static and Time-Dependent Perturbations of the Classical Elliptical Billiard

*Jair Koiller, Roberto Markarian, Sylvie Oliffson Kamphorst, and Sônia Pinto de Carvalho*

Numerical Experiments on Billiards

*Roberto Artuso, Giulio Casati, and Italo Guarneri*

Decay of Correlations in One and Two Dimensions

*András Krámlí*

Measures with Infinite Lyapunov Exponents for the Periodic Lorentz Gas

*N. I. Chernov and S. Troubetzkoy*

Quantum Transport and Classical Dynamics in Open Billiards

*H. Ishio*

Scars in Nonintegrable and Rational Billiards

*M. Tomiya and N. Yoshinaga*

Application of the Diffraction Trace Formula to the Three-Disk Scattering System

*Per E. Rosenqvist, Gábor Vattay, and Andreas Wirzba*

Hard Chaos and Adiabatic Quantization: The Wedge Billiard

*T. Szeredi*

Scars of Periodic Orbits in the Stadium Action Billiard

*J. S. Espinoza Ortiz, M. A. M. de Aguiar, and A. M. Ozorio de Almeida*
