

## **Future Contributions to *Journal of Statistical Physics***

### *ARTICLES*

Determinants of Airy Operators and Applications to Random Matrices

*Estelle L. Basor and Harold Widom*

Transition from the Compact to the Dense Phase of Two-Dimensional Polymers

*Jesper Lykke Jacobsen and Jané Kondev*

Polymer Gas Approach to  $N$ -Body Lattice Systems

*Aldo Procacci and Benedetto Scoppola*

The Restriction of the Ising Model to a Layer

*C. Maes, F. Redig, and A. Van Moffaert*

Variational Principle for Some Renormalized Measures

*R. Lefevere*

Statistical Entropy of a Lattice-Gas Model: Multiparticle Correlation Expansion

*Santi Prestipino and Paolo V. Giaquinta*

Diffusion of a Test Chain in a Quenched Background of Semidilute Polymers

*Stefan Müller*

The Computational Complexity of Sandpiles

*Cristopher Moore and Martin Nilsson*

Entropy Production: From Open Volume-Preserving to Dissipative Systems

*T. Gilbert and J. R. Dorfman*

A Semiclassical Theory of a Dissipative Henon–Heiles System

*Bidhan Chandra Bag and Deb Shankar Ray*

Continuum Field Model of Driven Lattice Gases

*F. de los Santos and P. L. Garrido*

Stochastic One-Dimensional Lorentz Gas on a Lattice

*E. Barkai and V. Fleurov*

Existing of Solutions of a Kinetic Equation Modeling Cometary Flows

*Pierre Degond, José L. López, Frédéric Poupaud, and Christian Schmeiser*

Stationary Scattering Theory for a Charged Particles Transport Problem

*G. Busoni and H. Emamirad*

Some Results on Sinai Diffusion

*Michael J. Stephen*

Microscopic Analysis of Clausius–Duhem Processes

*C. Jarzynski*

On Percolation with Fibers or Layers

*André Toom*

On Relativistic Collisional Invariants

*C. Cercignani and G. M. Kremer*

Spatial Statistics of Stochastic Fiber Networks

*C. T. J. Dodson and W. W. Sampson*
