

EDITORIAL

The rapid development of thermal analysis in the last few years has led to a considerable growth in the literature. This increase is reflected by the fact that JTA — the Journal of Thermal Analysis — has already outgrown the volume originally planned.

In order to keep pace with the increasing number of high quality papers submitted to JTA it has been necessary, in the interest of faster publication, to change the frequency of publication from quarterly to bi-monthly as from 1973. We hope that this solution will be met with satisfaction by both readers and contributors, and look forward to your continued support.
