SCANDINAVIAN SYMPOSIUM ON THERMAL ANALYSIS

The Scandinavian Committee for Thermal Analysis will arrange its next symposium at the Research Establishment at Risø of the Danish Atomic Energy Commission, Roskilde, Denmark, September 13–14, 1973.

The subject of the symposium will be:

“Characterization of materials by thermal analysis”.

The following plenary lectures will be given:

- The study of equilibria by means of thermal analysis, by *dr. J. Šesták*.
- The use of the step scanning technique as a thermoanalytical method in investigations of equilibria, by Professor *K. A. Simonsen*.
- Characterization of polymers by thermoanalytical methods, by *E. Sörvik*.

The purpose of the symposium is, first of all, to bring Scandinavian research workers together to give them an impression about the activities within the thermoanalytical field in the Scandinavian countries. Participants from the Scandinavian countries are therefore first of all invited, but participants from other countries are welcome as well. Conference languages are English or any of the Scandinavian languages.

6th CZECHOSLOVAK CONFERENCE ON THERMAL ANALYSIS

“Thermanal” organized by the Department of Chemical Technology of Silicates at the Slovak Technical University, and by the Slovak Chemical Society, Bratislava, will be held in the High Tatras, Czechoslovakia, on 4–6 October 1973.

The following sections are planned:

1. General problems and equipment for thermal analysis;
2. Thermal analysis of silicates and of mineral raw materials;
3. Thermal analysis in Inorganic Chemistry and Technology;
4. Thermal analysis in Organic Chemistry, Macromolecular Chemistry and Technology.

Participants from abroad may deliver their lecture in Russian, English or German. For further information please contact Doc. Ing. M. Vaniš, Faculty of Chemical Technology, Jánska 1, 660 37 Bratislava, Czechoslovakia.

SUMMER SCHOOL ON CALORIMETRY, LYON-VILLEURBANNE, 1973

The 2nd Summer School on Calorimetry will be organized, on behalf of the Association Française de Calorimétrie et d'Analyse Thermique, at the Institut National des Sciences Appliquées, at Lyon-Villeurbanne, France, from September 24 to September 29, 1973.

The course is primarily intended for students preparing a PhD Thesis, for scientists from the industry and, more generally, for all persons engaged in the fields of thermal measurements.

The programme will consist i) of lectures, at the graduate level, on the theory and applications of calorimetry: DTA and DSC and ii) of practical sessions during which all participants will
