THERMAL ANALYSIS TOPICAL GROUP FORMED

Recently, a "Thermal Analysis Topical Group" has been formed within the North Jersey Section of the American Chemical Society.

The new topical group has an ambitious program to attract professionals from the N. Y. Metropolitan area and neighboring states to attend lectures by top scientists, and to participate in symposia and discussion groups dealing with general and specific problems. The first meeting of the group was a microsymposium in April on "Thermal Analysis: a Technique for Polymer Additive Selection". Future topics for 1977 are: Purity, Inorganic Applications of Thermal Analysis, and Polymer Characterization. The officers of the groups are E. A. Turi (Chairman), S. W. Shalaby (Co-Chairman), A. J. Melveger (Secretary), S. A. Moros (Treasurer), and P. K. Gallagher, J. J. Maurer, W. R. Ott and E. M. Pearce (Councilors). For further information write or call Dr. Edith A. Turi, Allied Chemical Corporation, P. O. B. 1021R, Morristown, N. J. 07960, U.S.A. (201) 455-2862.
