### ERA TECHNOLOGY TO RUN SEMINAR ON DEVELOPMENTS IN SMALL CAPACITORS

London, sept. 18, 1980

The next ERA Technical Seminar, to be held at the Royal Garden Hotel, London on 18 September 1980, will look closely at four main areas of development in capacitor technology. This one-day seminar will be divided into sessions covering metallised film, multilayer ceramic, electrolytic and energy storage types of capacitor.

The proceedings will follow the same format as the previous highly successful ERA Technical Seminars. The full Volume of Papers will be sent to delegates well in advance of the event and authors will only present highlights of their contributions, thus allowing the maximum time for discussion.

As usual there will be a specialised exhibition, of related products and services for the capacitor industry. The seminar and exhibition will be held in the self-contained Palace Suite at the Royal Garden Hotel, thus ensuring that delegates have the maximum opportunity to view the exhibits between the seminar sessions and during the luncheon period. The exhibition will also be open to the general public and will remain open for approximately one a half hours after the close of the seminar.

Over 150 delegates are expected to attend and the seminar will appeal to both manufacturer and user interests. The delegate's fee of £65 (£75 for non-members of ERA) includes luncheon and refreshments on the day and provision of the Volume of Papers. The charge of £195 (£210 for non-members), per exhibition stand space also includes free registration of one delegate.

Registration forms, exhibitors' order forms, and further information are available from:—

## EUROANALYSIS-IV

European Conference on Analytical Chemistry  
Helsinki/Espoo, Finland August 23 – 28, 1981

Euroanalysis IV will be held in the town of Espoo, approximately 9 km from the centre of Helsinki, from Sunday August 23 to Friday August 28, 1981.

## Topics of the Conference.

Euroanalysis IV will aim, as the earlier conferences, at the broadest possible coverage of analytical chemistry. The programme is being planned to appeal both to practising analytical chemists at industrial and control laboratories and to those teaching and doing research on analytical techniques at universities and research institutes.

## Scientific programme

The programme will consist of invited plenary and keynote lectures, contributed papers and Special Sessions. In order to ensure the high quality of the programme all contributed papers will be refereed by an international panel.

## Contributed papers

All those intending to participate in the Conference are welcome to submit papers to be included in the scientific programme. The Scientific Committee will consider papers according to their relevance to the Conference programme and their scientific contents. The list of possible topics includes thermal analysis, too.

## Address for correspondence

Euroanalysis-IV.  
Association of Finnish Chemical Societies
