

PREFACE

The Seminar on Modern Application of Thermal Analysis was organized by the Technical University of Budapest, (Institute of Inorganic Chemistry, Institute for General and Analytical Chemistry, Institute for Plastic and Rubber Industry) Chemical Society and the Hungarian Academy of Sciences. The members of the Organizing Committee were Dr. G. Liptay, Dr. G. Pokol (Secretary) and Dr. J. Varga.

The Seminar was held at the Technical University of Budapest on April 26-27, 1990. The Seminar was attended by over hundred scientists coming mainly from Hungary but also from twelve other European countries.

The good attendance and the high number of papers presented reflect the current interest in thermal analysis both in science and industry.

This issue contains a collection of invited and contributed papers presented at the Seminar on Modern Application of Thermal Analysis.

It is my pleasant duty to thank all authors for their contributions. Special thanks should be directed to Mrs. H. Kuselits for her valuable assistance towards the success of the Seminar.

Dr. György Pokol
